

PRODUCT TEARDOWN: PURCHASING A PHYSICAL PRODUCT

What?

Nike is a multinational corporation that designs, develops, and sells athletic footwear, apparel, and accessories. The company was founded in 1964 as Blue Ribbon Sports by Bill Bowerman and Phil Knight, and was renamed Nike, Inc. in 1971.

Nike app offers shopping, personalized recommendations, and access to exclusive products, events, and experiences. The app also features daily stories, training tips, and style advice from Nike athletes and coaches. Users can chat with experts for style tips or fit advice and join the Nike community.

Nike Wholesale Revenue

1

Brand Identity Association

Nike is one of the most recognizable and iconic brands in the world. This brand recognition creates a sense of trust and sense of community

2

Convenience

The app allows users to shop for Nike products anytime, anywhere, and with just a few clicks. Users can also access workout routines and nutrition tips on the go.

3

Personalization

The Nike app uses data from users' profiles and activity to offer personalized product recommendations, customized training plans, and tailored content.

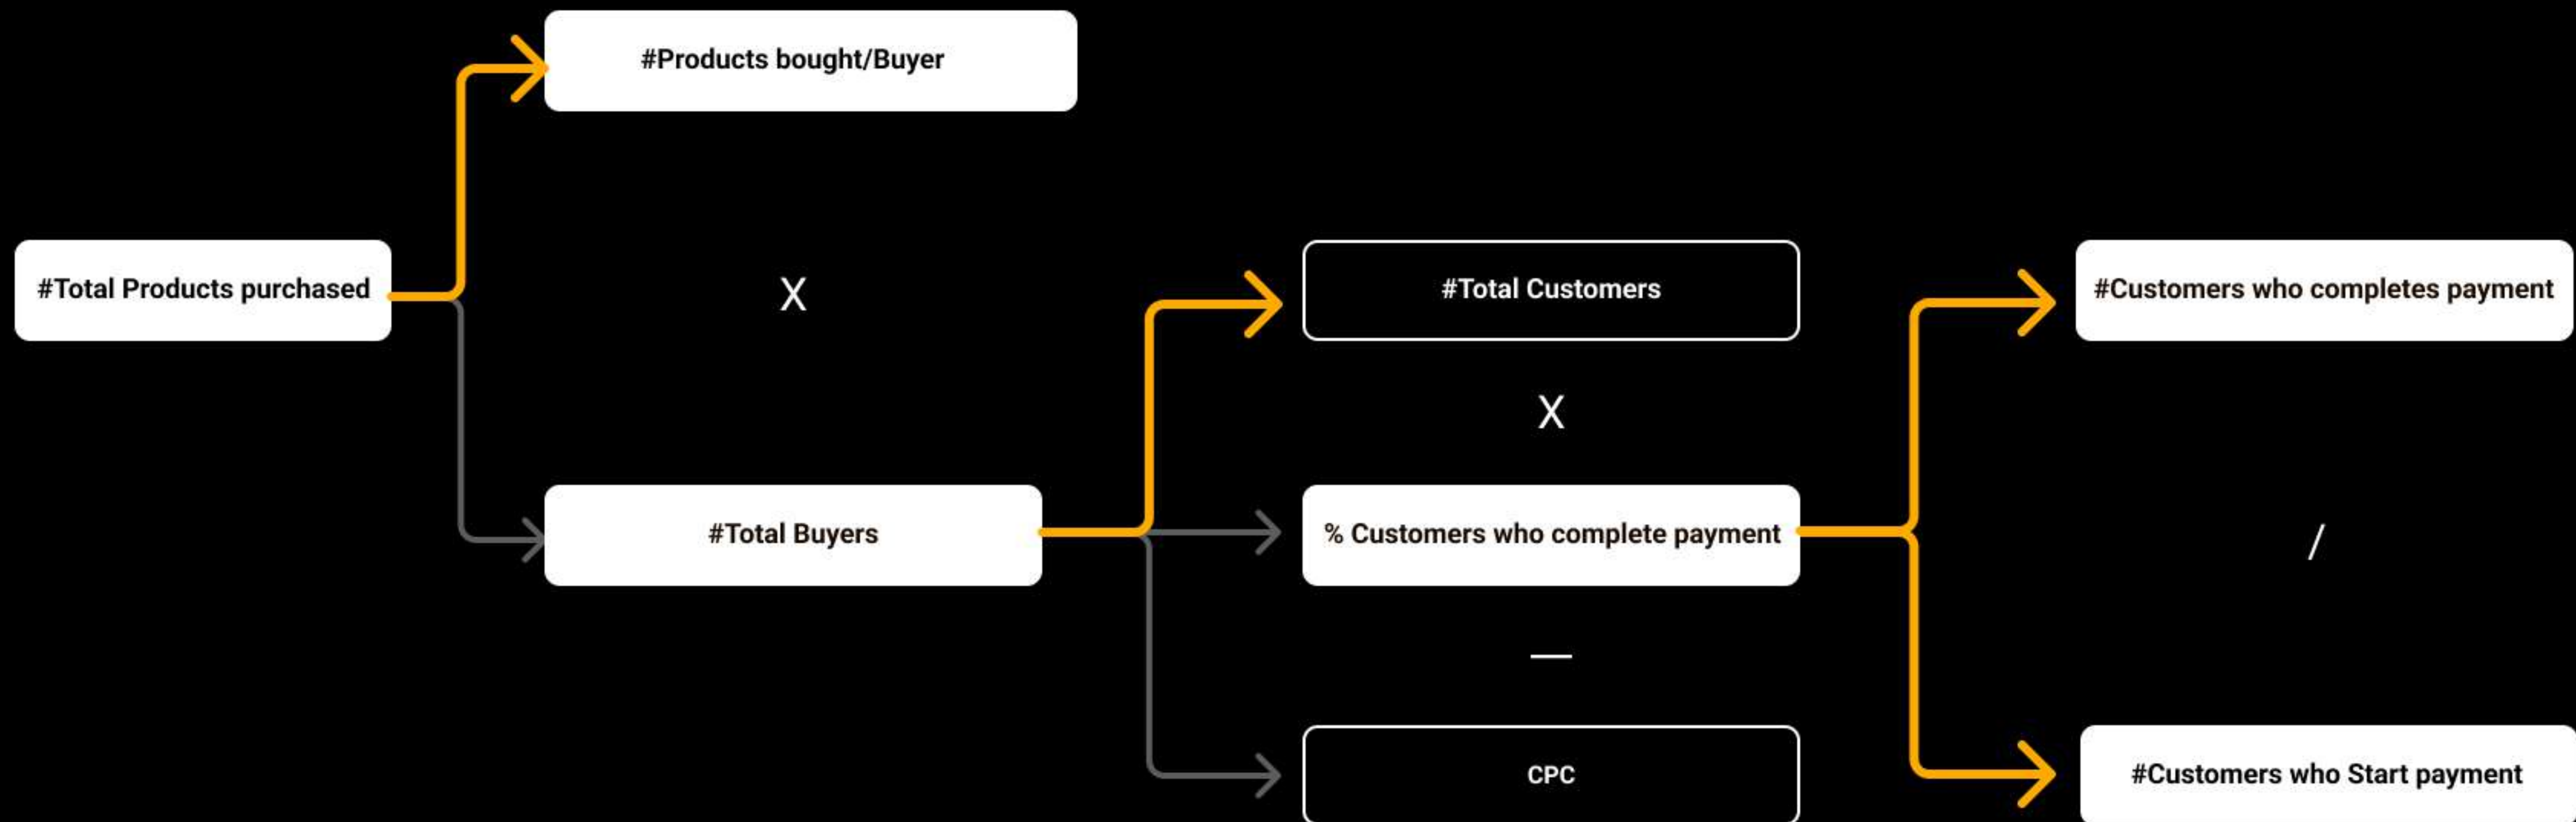

4

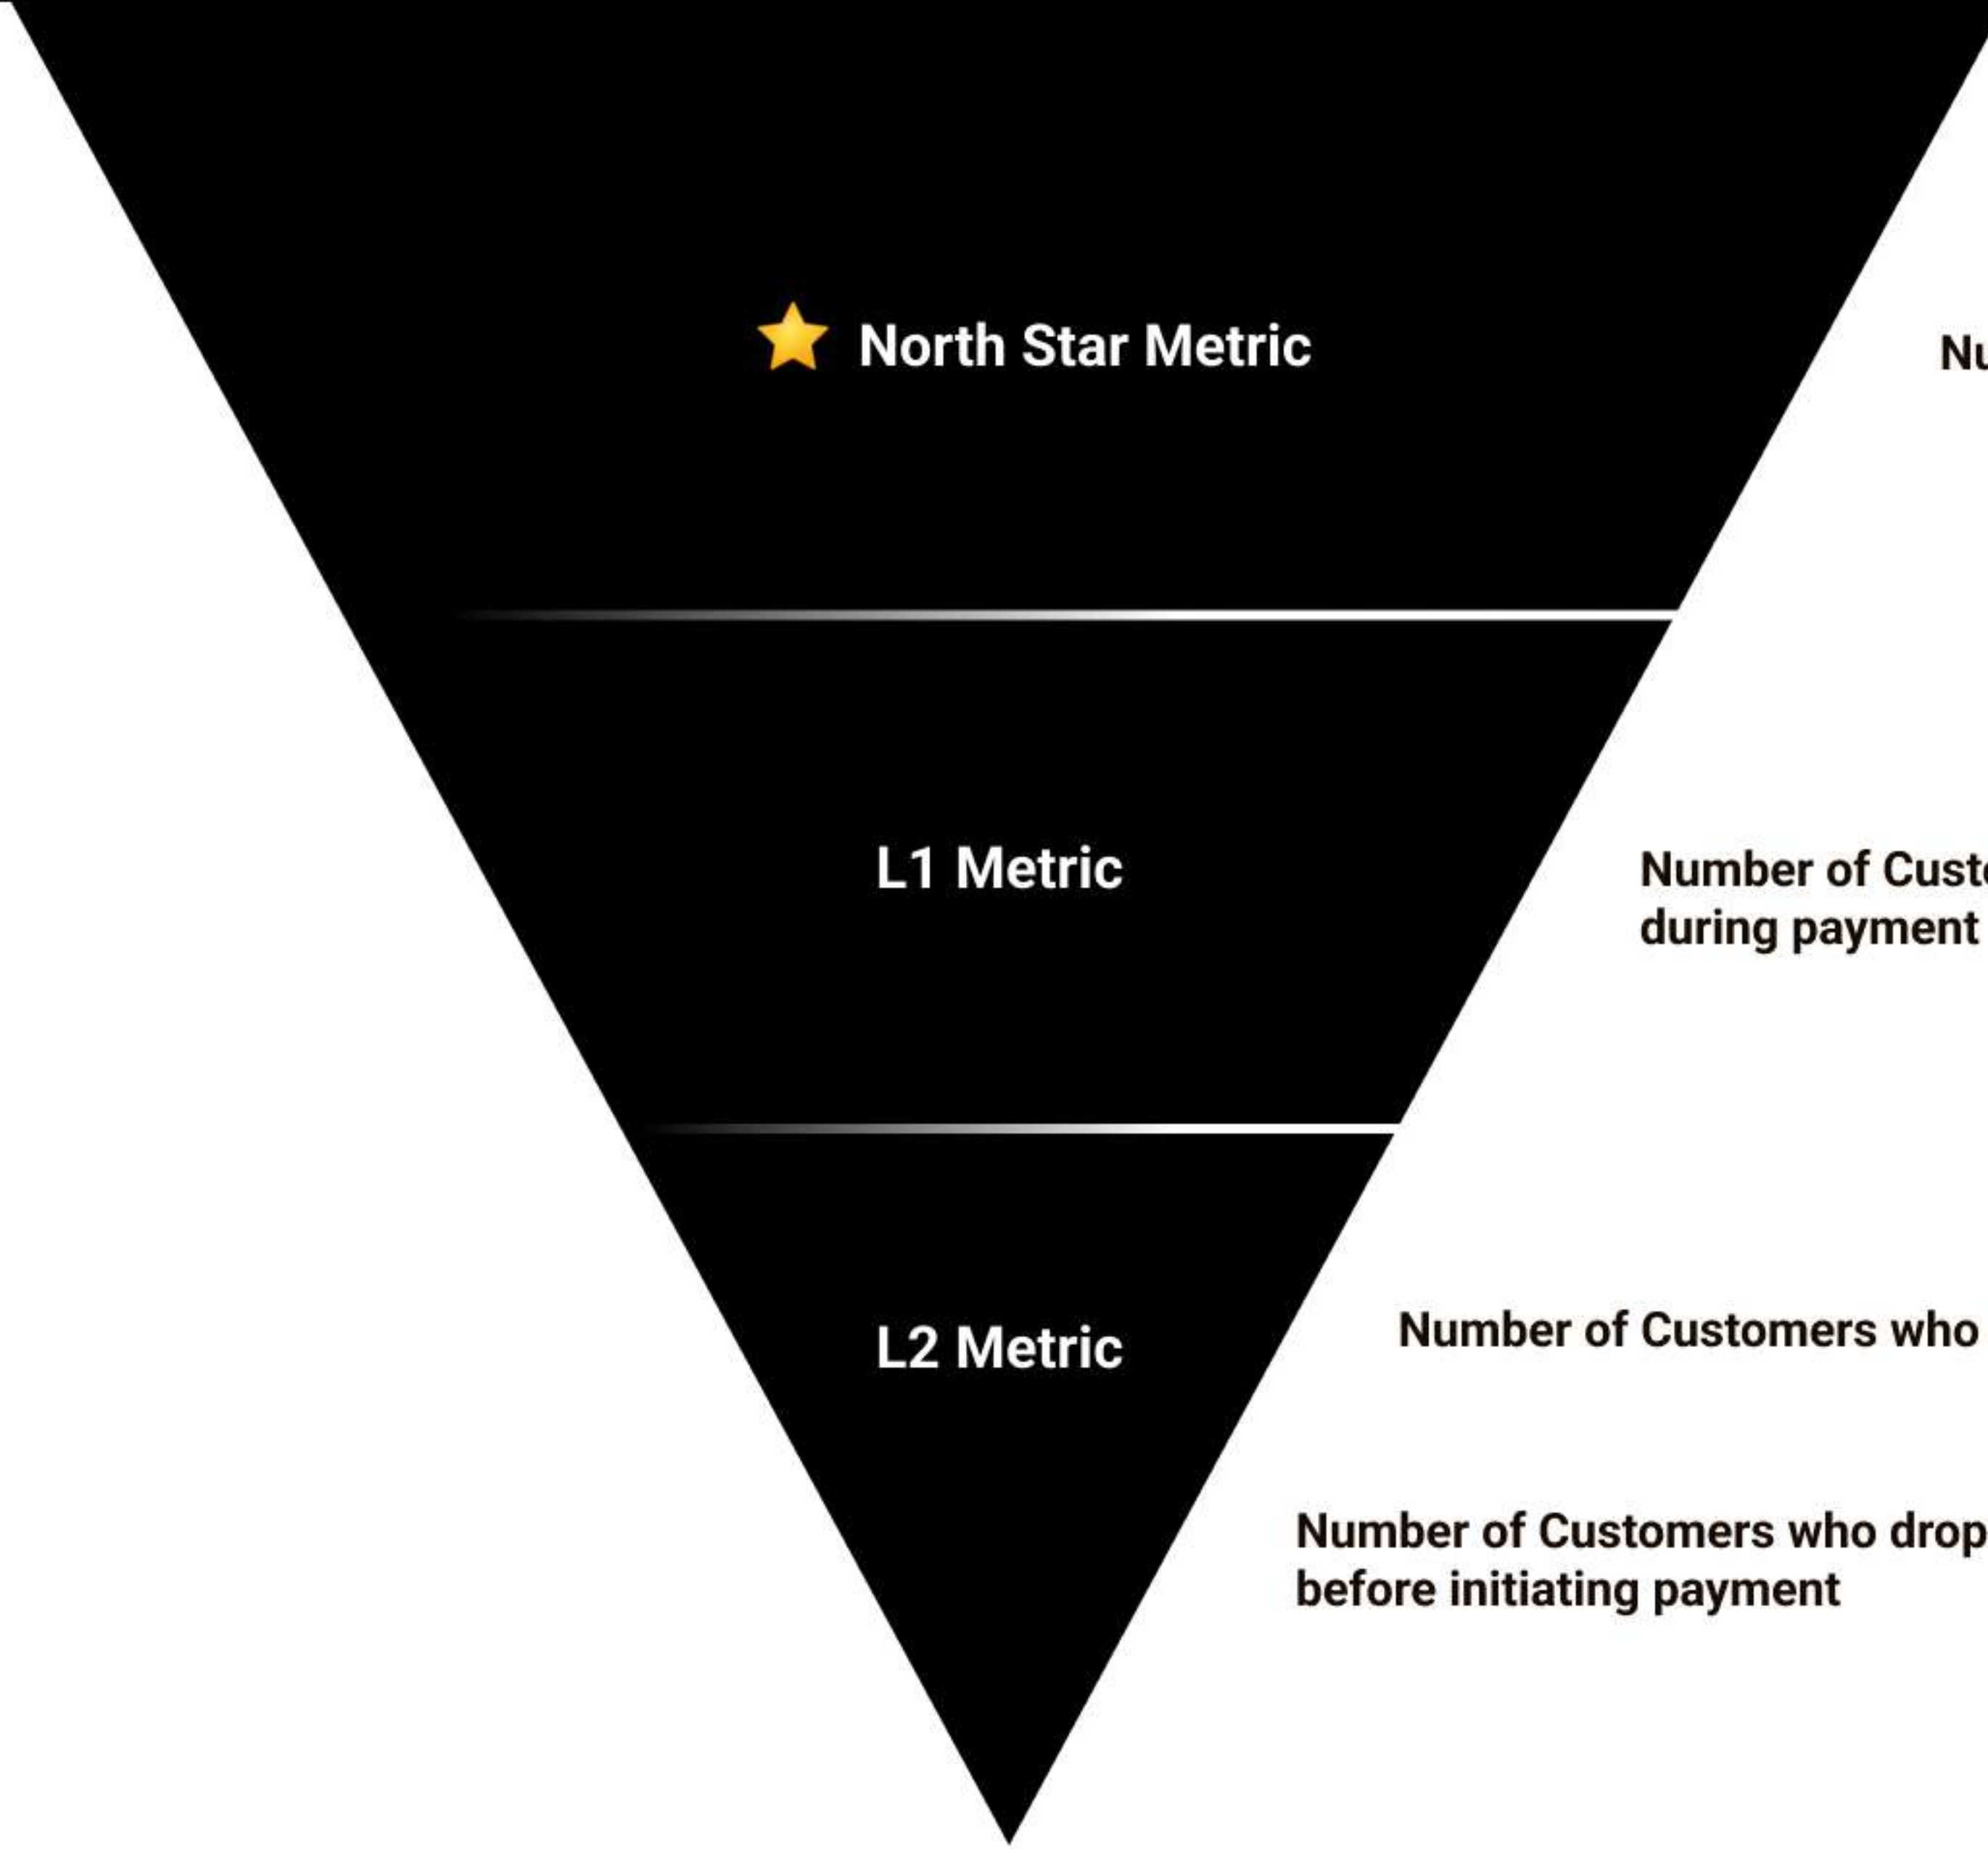

Community access

The app allows users to connect with a community of athletes and fitness enthusiasts, share their progress and achievements, and receive motivation and support.

A peek into the metrics that dictate it's growth

★ North Star Metric

Number of products purchased per month

L1 Metric

Number of Customers who drop off
during payment

L2 Metric

Number of Customers who Add to cart

Number of Customers who drop off
before initiating payment

Let's dive into the journey of buying a product

Let's Do it!

Jeevika Manohar

Age: 29
Status: Single
Occupation: Game Developer
Location: Bangalore

Ambivert Practical Active
Outgoing Spontaneous Impatient

About

Jeevika is a game developer by profession and a sports enthusiast by passion. She loves outdoor sports making lawn tennis, badminton and swimming some of her favorite leisure activities. As she regularly purchases active wear for herself, she opts to do it online. This way, she gets to compare and buy all at once. She is nevertheless a huge fan of Nike as a brand and decides to go with Nike yet another time for her purchase.

Goals

- To be able to find her favorite athleisure pants
- To be able to place an order without a hassle
- To be able to compare her choices all at once
- To be able to complete payment without a hassle

Pain points

- Finding what she needs quickly
- Filtering her requirements
- She finds payment process very cumbersome

Ready to checkout

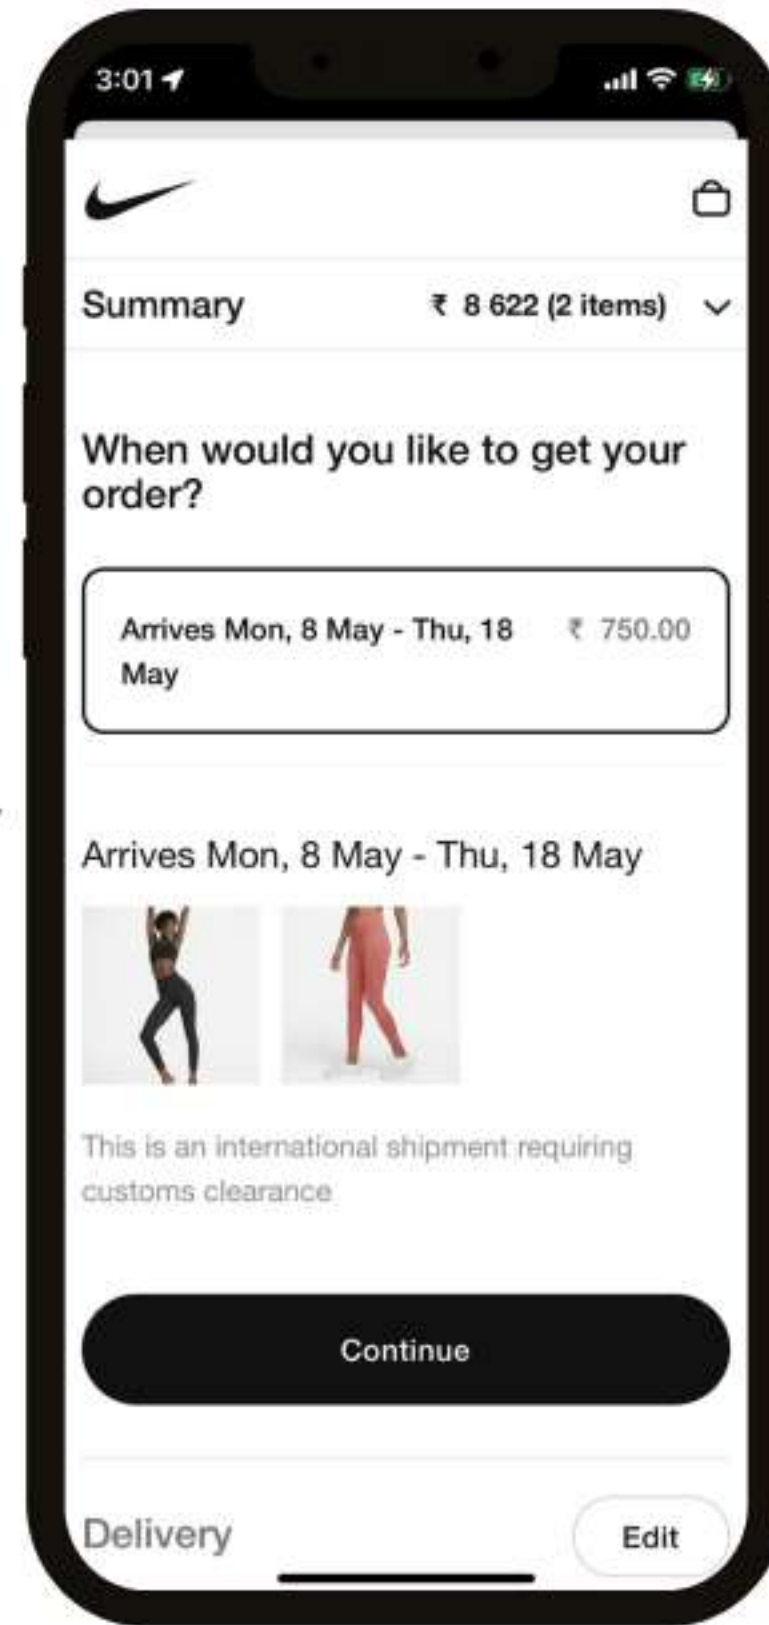

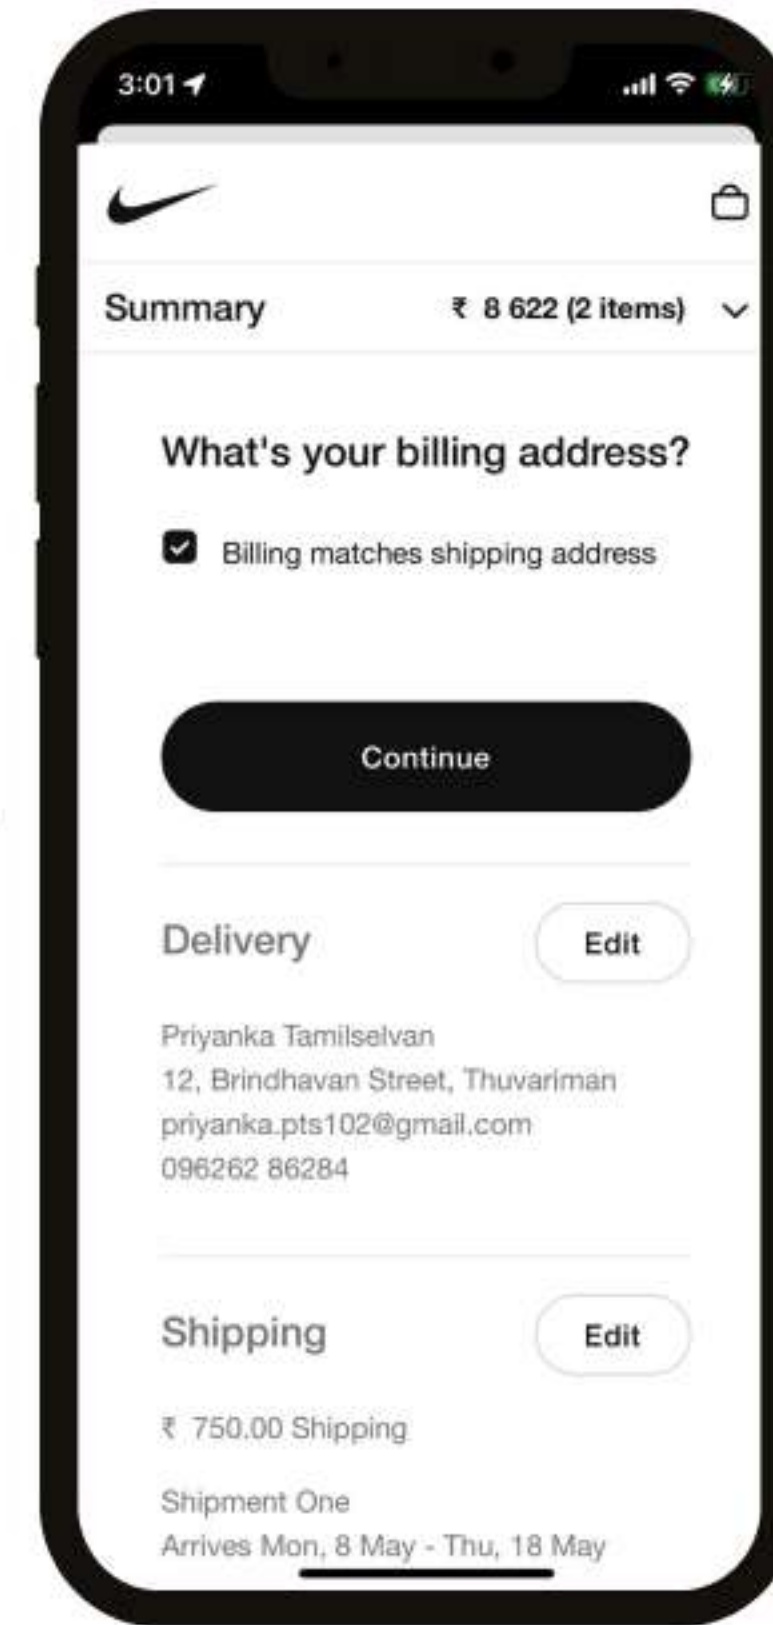

Step 11
Enter passcode to checkout

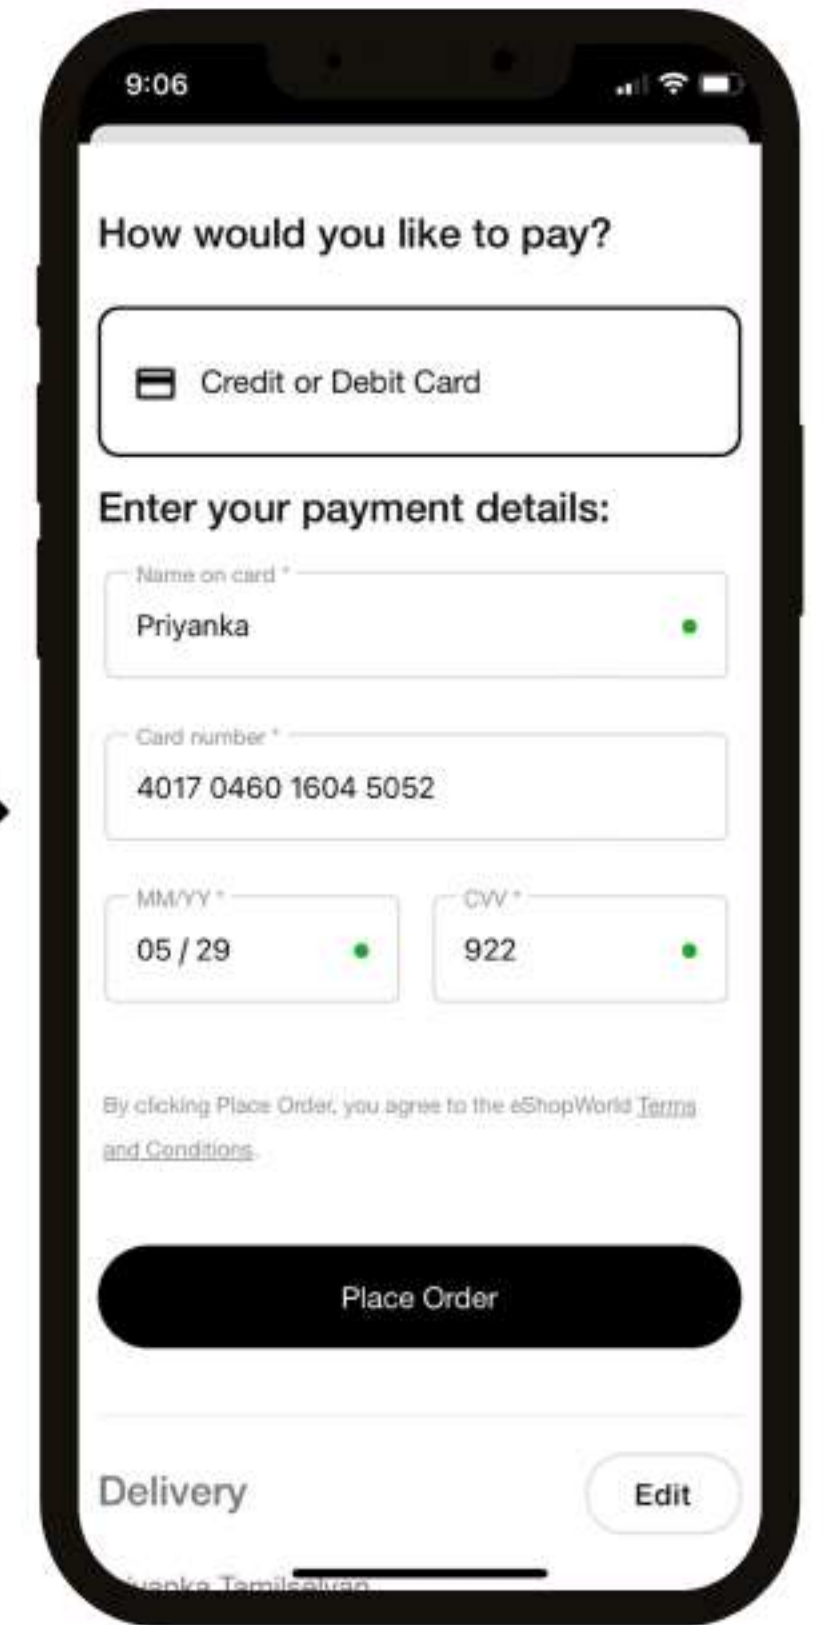

Step 12
Choose the address

Step 13
Time slot for arrival

Step 14
Confirming billing address

Step 15
Payment process

Stages	Landing page	Shop Zenvy Leggings	Specifications	Favorites	Checkout	Choose address	Confirm Timeslot & Billing address	Payment
Steps (Doing)	On opening Nike App, she arrives at the landing page with featured apparels upfront. She checks the carousel and clicks on the Zenvy leggings category	Scrolls down, reads the basic specifications and clicks on Nike Zenvy black which is a best seller	Reads the detail specifications and adds it to favorites for later reference and later visits the favorite listing	Chooses two and adds to cart before checkout	Clicks on check out and types out the passcode	Clicks on the saved address and continues	Reads and clicks on continue. Reads the billing address and clicks on continue yet again	Sees that there is only one way to do the payment and hence ends up filling the details
Comment (Saying)	"Finaaaalllly! Here to get my pants!! Oh, wow! Whats this?"	"Woaah! That's a huge collection. Nah! I need full length and not 7/8th!"	"Oh! Beautiful! Adding it to the favorites now!"	"Ah! This looks better. It is a little cheaper as well!"	"Thank god I remember the passcode!"	"Nicee! I had already saved it looks it!"	"Why are they asking when I would like to have it delivered? Like they are offering me a choice"	"Whaaatt!" Who uses credit card details these days? Where is GPay? No, damn! what a pain!"
Thoughts (Thinking)	"I wonder what are the new arrivals. Damn, these guys always have such good collection!"	"Man, this collection is overwhelming. All great choices! How do I choose?"	"Hmm! Little confused which on to choose now. I like the peach one as well! Let me go and check!!"	" Hope I am taking the right call! Or should I just get both?"	"They should really not a passcode for security"	"Phew! Would have had to retype the whole address if I hadn't saved the last time!"	"Man! I wish I know the difference between billing and shipping address"	"This is frustrating to get the bag, find the card and type out the details!"
Emotions (Feeling)	 Excited	 Happy	 Overwhelmed	 Excited	 Impatient	 Happy	 Confused	 Excited  Disappointed
Insights	Increasing the visibility of new arrivals and trending purchases gains the users attention immediately and can help in positively diverting the flow	Providing basic specifications for each within the tile display format gives the user enough information to check out the details	"Favorite" or "Add to wish list" feature needs to be set as a priority for a purchase. And, the listing should be an easy access and not within an internal flow for better user experience	Prioritization of information with the favorite tile plays a significant role in helping the user decide on what is to be added to the cart	A 6 digit passcode may not be the best security option to proceed for a checkout. It creates friction in the system	Typing out the address is understood as a point of friction. There could be better ways to approach it	Choice of time slot could help in better Customer Satisfaction and reduces the probability of first time delivery failures	Multiple payment options could reduce the drop off rate of customers for an ecommerce platform

Positive User Experience

- Increasing the visibility of new arrivals and trending purchases shows the range of options to the user upfront promising a good purchase
- "Favorite" feature is used as a priority for a user journey. It's placement encourages users to easily access and compare their options leading to a better user experience

Negative User Experience

- Asking passcode for Nike may not be the best way to provide security. There are chances one may forget. It could be avoided
- Absence of a time slot to choose for delivery although the tag promises it
- No option for other payment options

Recommendations

- Shifting the security confirmation to somewhere down the payment flow could potentially reduce friction in the user flow
- It is highly recommended to introduce multiple payment options other than credit cards to keep up with its competitors. Else, it may lead to drop offs

Thankyou!
