

Snapchat

**Teardown of Conversational AI
Karandeep Singh**

Overview

Snapchat is a multi-media instant messaging service and software created in the United States by Snap Inc., formerly known as Snapchat Inc. One of the main characteristics of Snapchat is that images and messages are frequently only accessible for a brief period of time before they are no longer viewable by their receivers. The app has changed from its initial focus on peer-to-peer picture sharing to now including users' "Stories" comprising 24 hours of chronological material as well as "Discover," which allows brands to offer short-form, ad-supported content.

User Persona

Peter Verma, 27

Gender : Male

Location : Noida, India

Profession : Dev Ops Engineer

Description:

Introverted. Prefers to spend time alone. Talks to limited people.

Goals:

- Wants to have a meaningful conversation with AI.
- Wants to find someone to have conversation without any social commitments.
- Wants some recommendation of good filters and lenses.

Pain Points:

- Social interactions is rare due to his introverted nature.
- Wants to have deep and meaningful conversations than superficial conversations.
- Wants to avoid judgements by other people with his conversation.

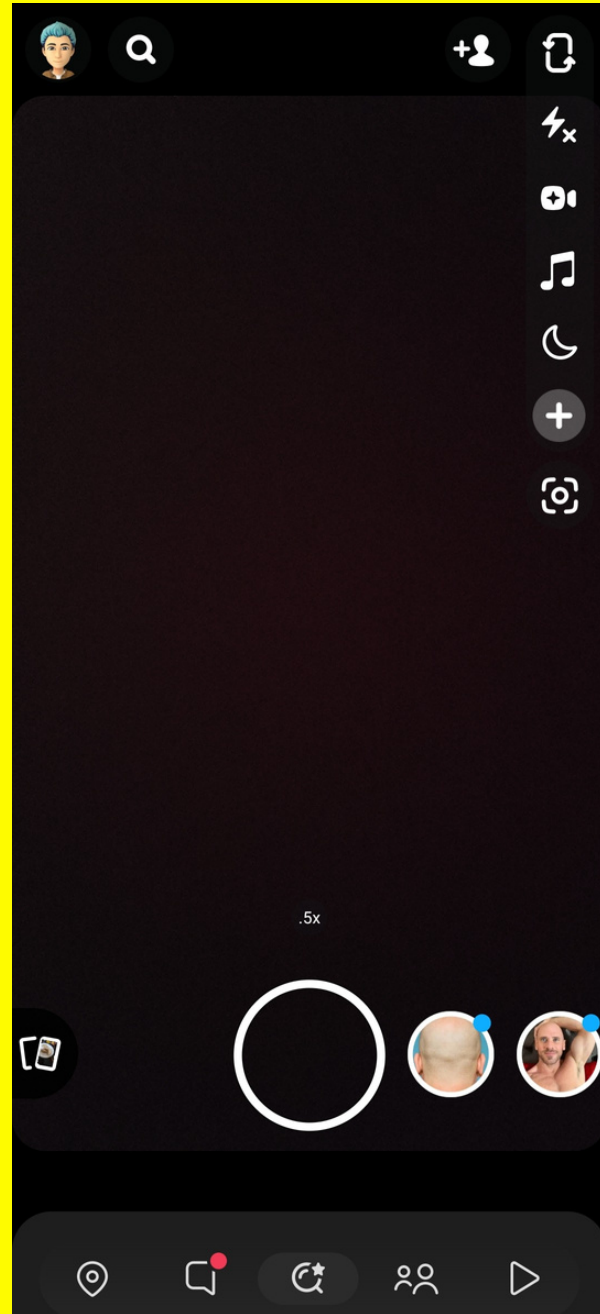

How My AI works

OpenAI's ChatGPT technology powers Snapchat's "My AI", which also has extra safety features and restrictions that are exclusive to Snapchat.

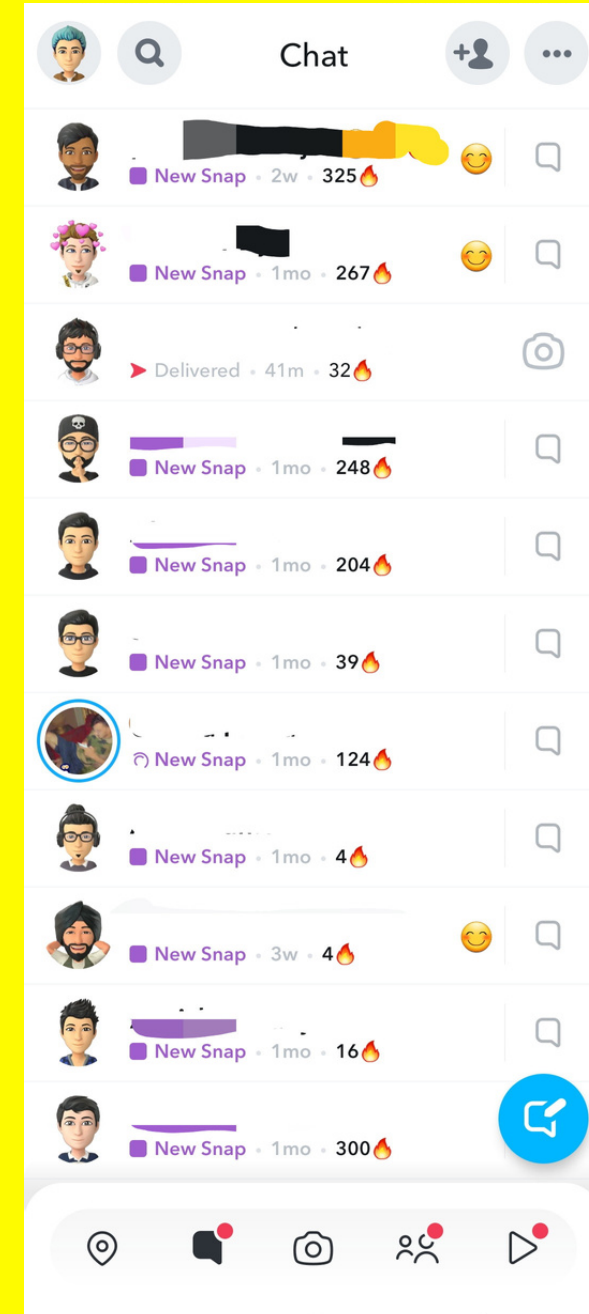

So How ChatGPT works?

- ChatGPT is a language model that uses deep learning techniques and a vast dataset to generate human-like text responses.
- It functions by dissecting the input text through analysis and creation of smaller embeddings that capture the context and meaning of each word and phrase.
- The model can then grasp the connections between words and provide coherent replies based on patterns it has discovered from a massive quantity of training data by feeding these embeddings into numerous layers of transformers.
- The output from the transformers is a text answer that is created by anticipating the most likely next word given the context, creating a discussion with users that is dynamic and meaningful from a contextual standpoint.

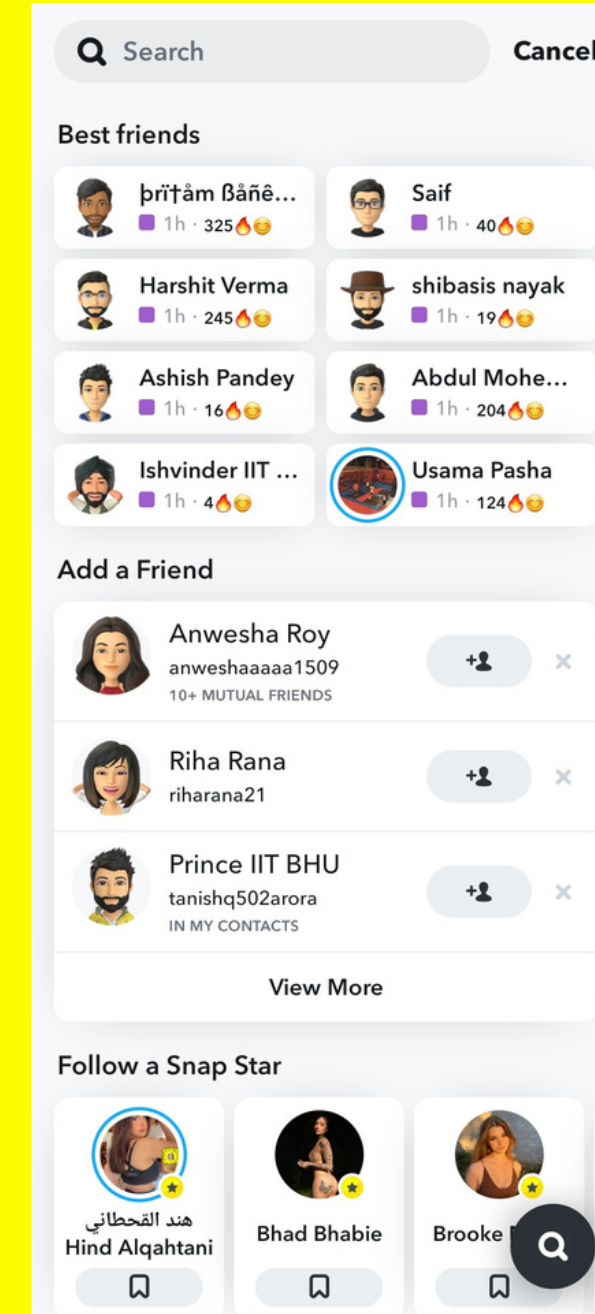

New User Journey Map (1/2)

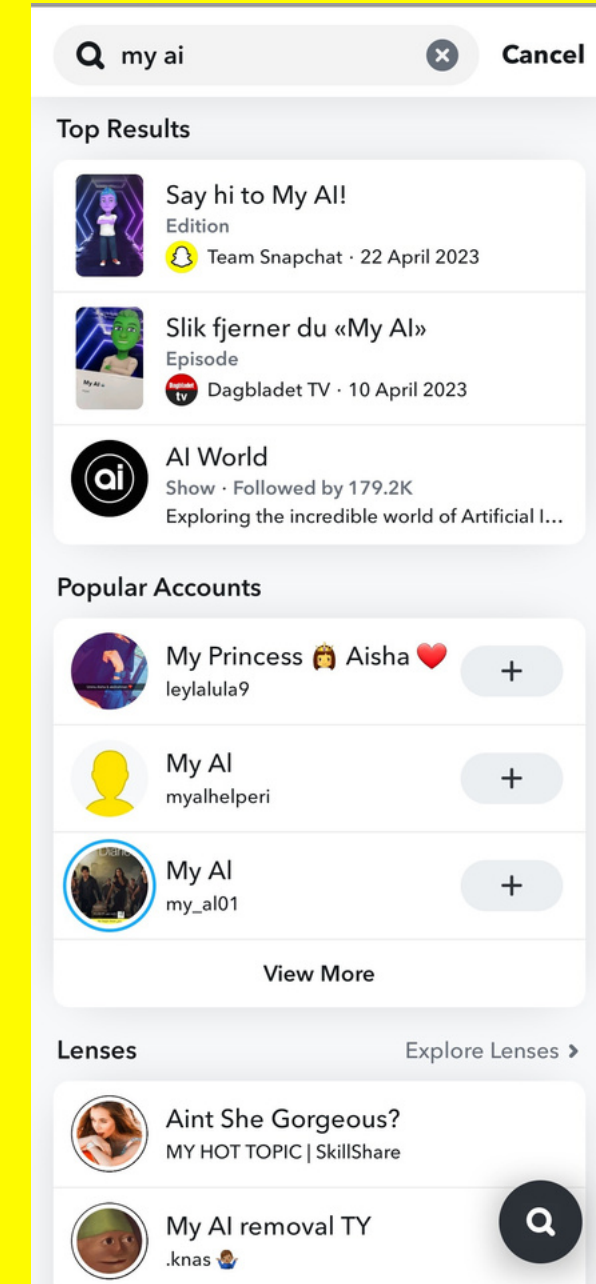

1. Click on the encircled part when you open the app. (It is at the bottom and second from left)

2. Click on the search icon (It is at the top and second from left)

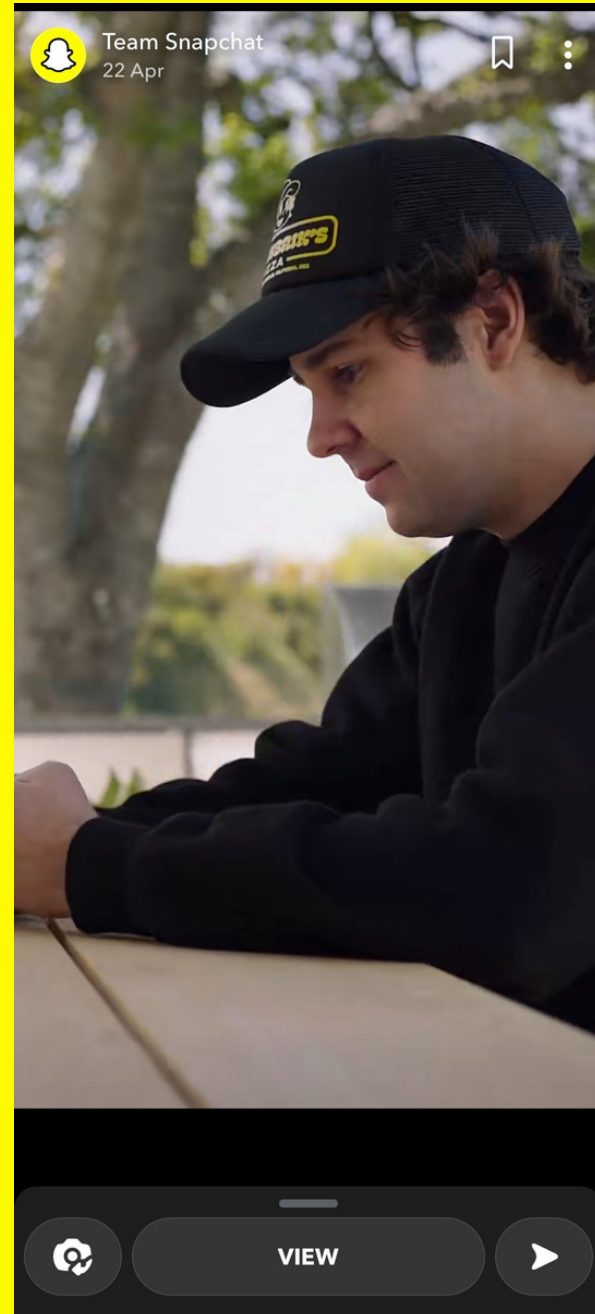

3. On the search bar at the top, type "My AI"

4. Click on the first "Top Results". It will be "Say hi to My AI"

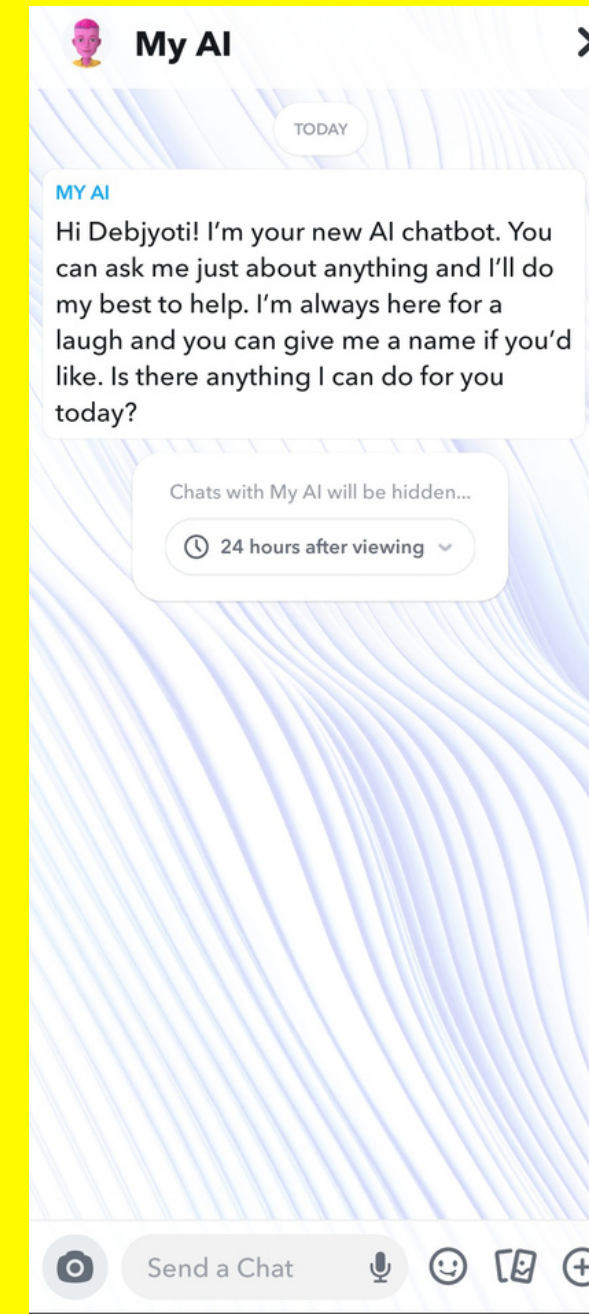

User Journey Map (2/2)

5. Click on "View"

6. Click on "Add Friend"

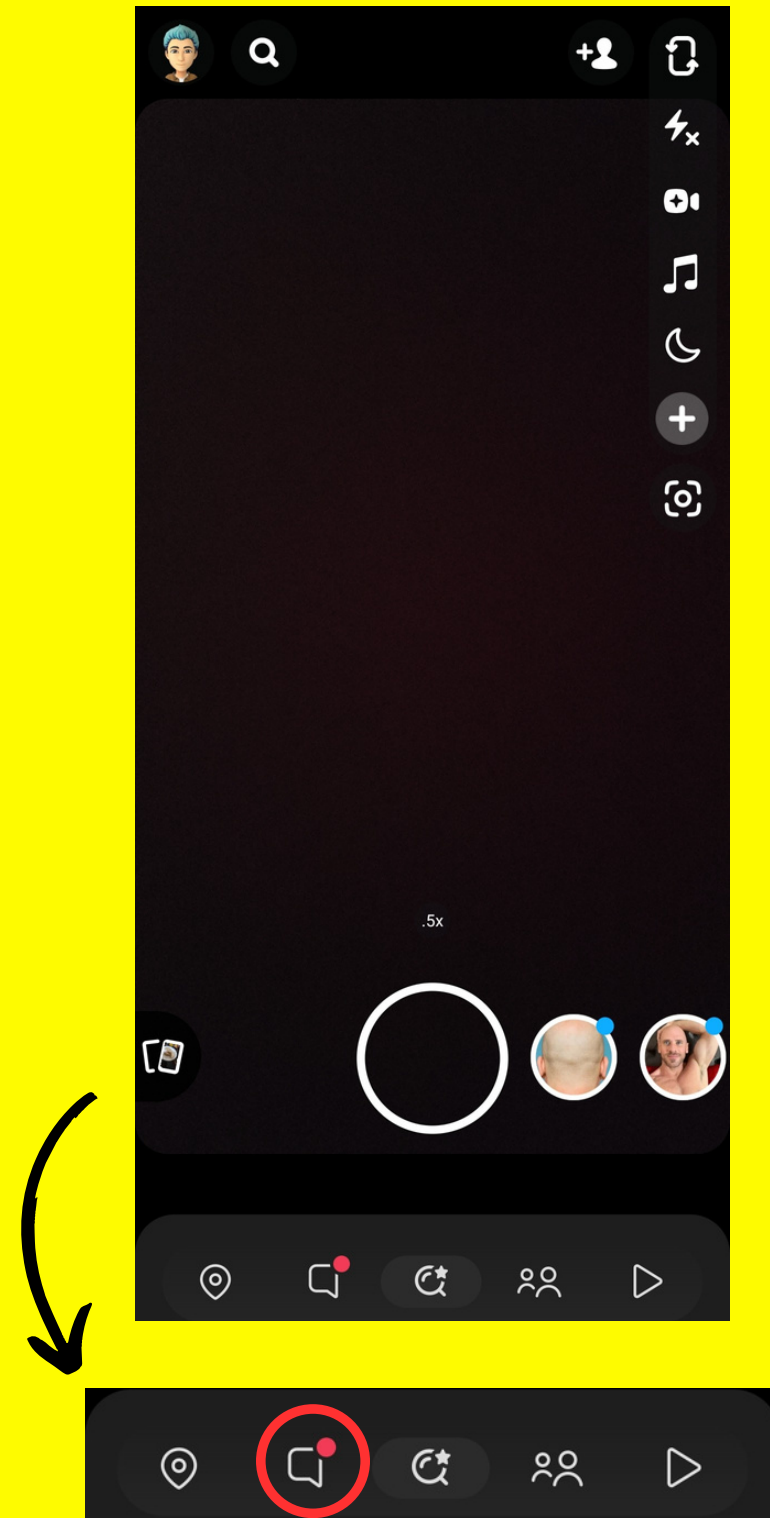

7. You will be redirected to "My AI" and you can ask any question

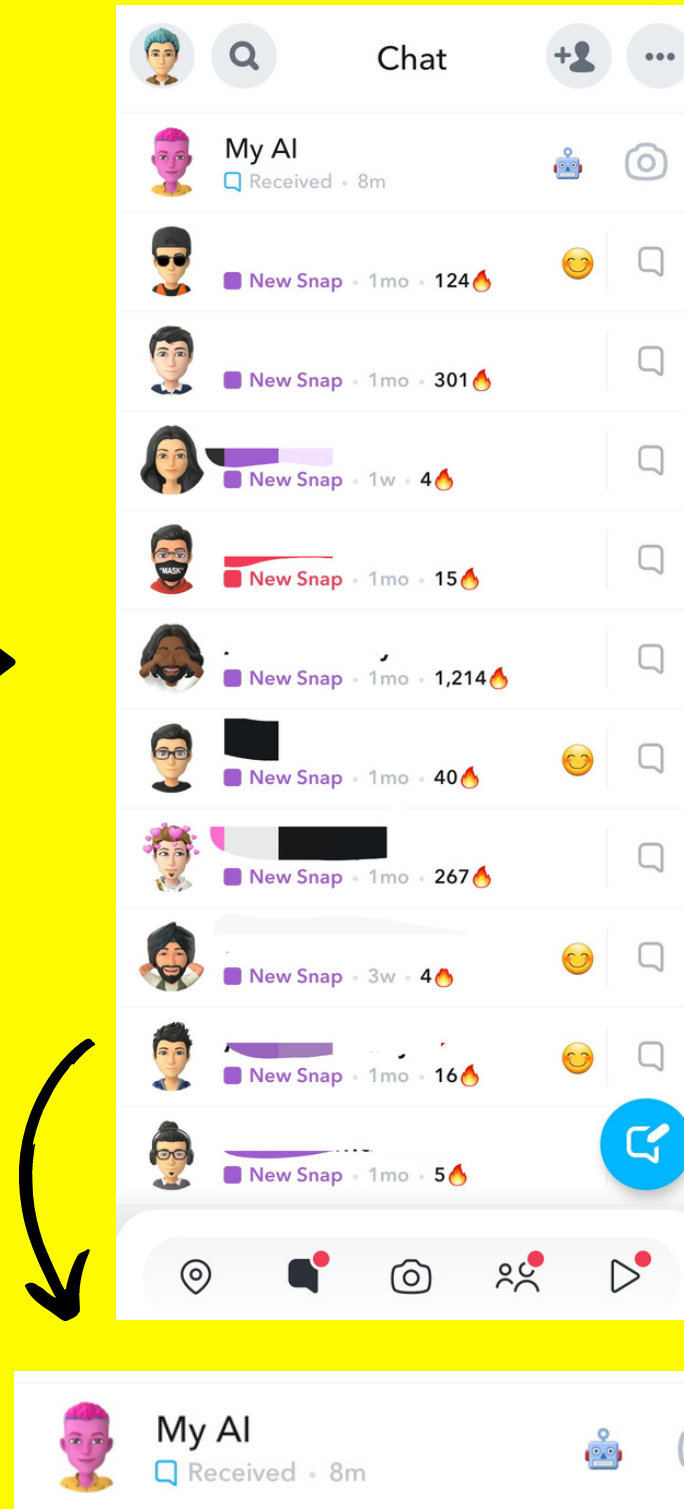

8. You will get response to your question you asked.

Setting Nickname (1/2)

1. Click on the encircled part when you open the app. (It is at the bottom and second from left)

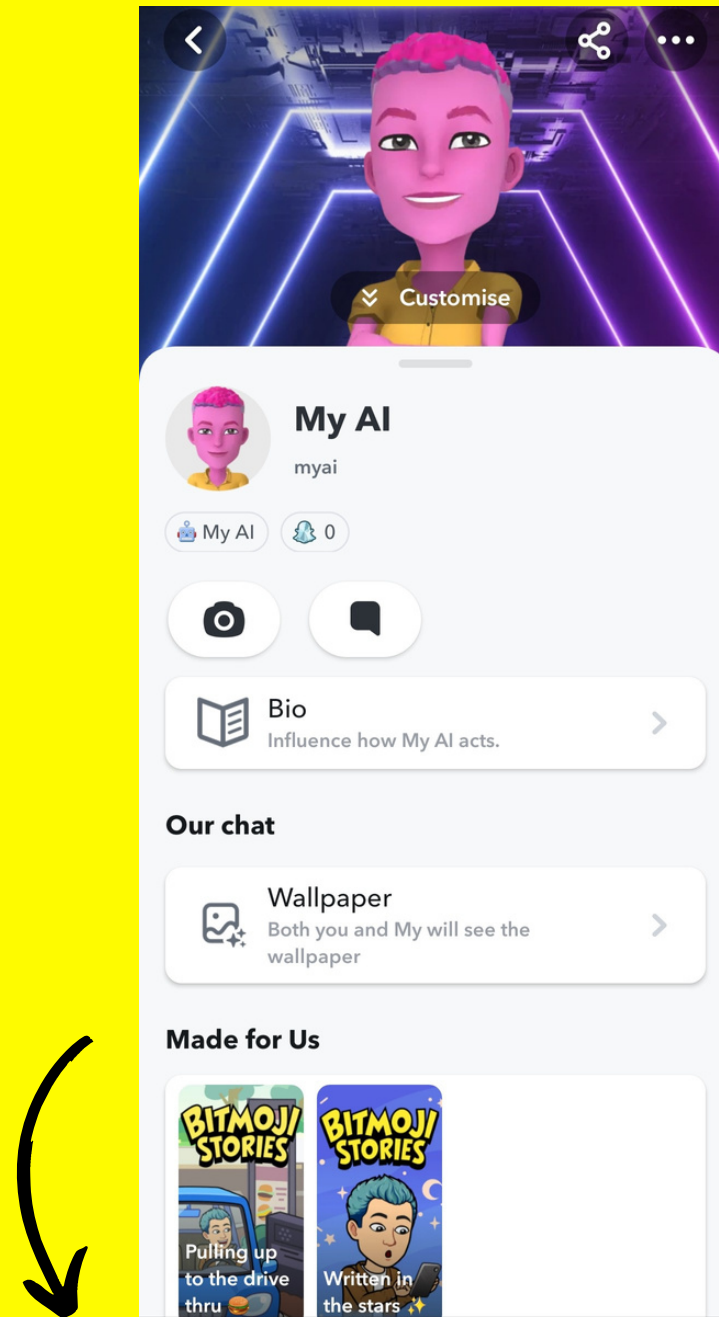

2. Click on "My AI" (click on the animated face or avatar to skip to the step 4)

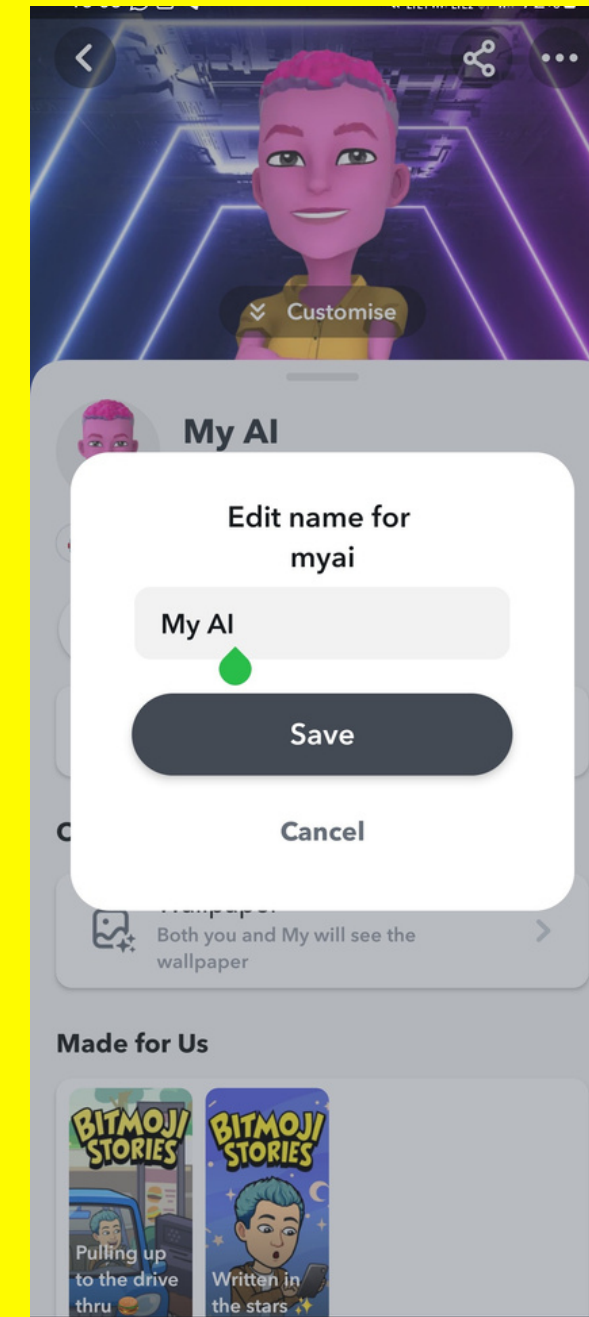

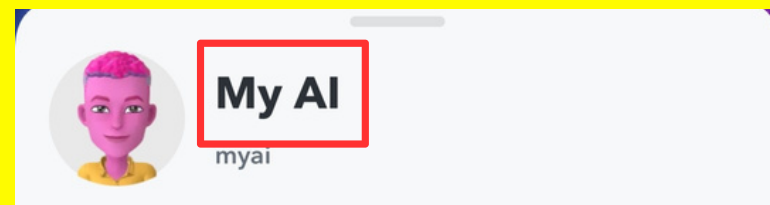

3. Click on the marked area.

Setting Nickname (2/2)

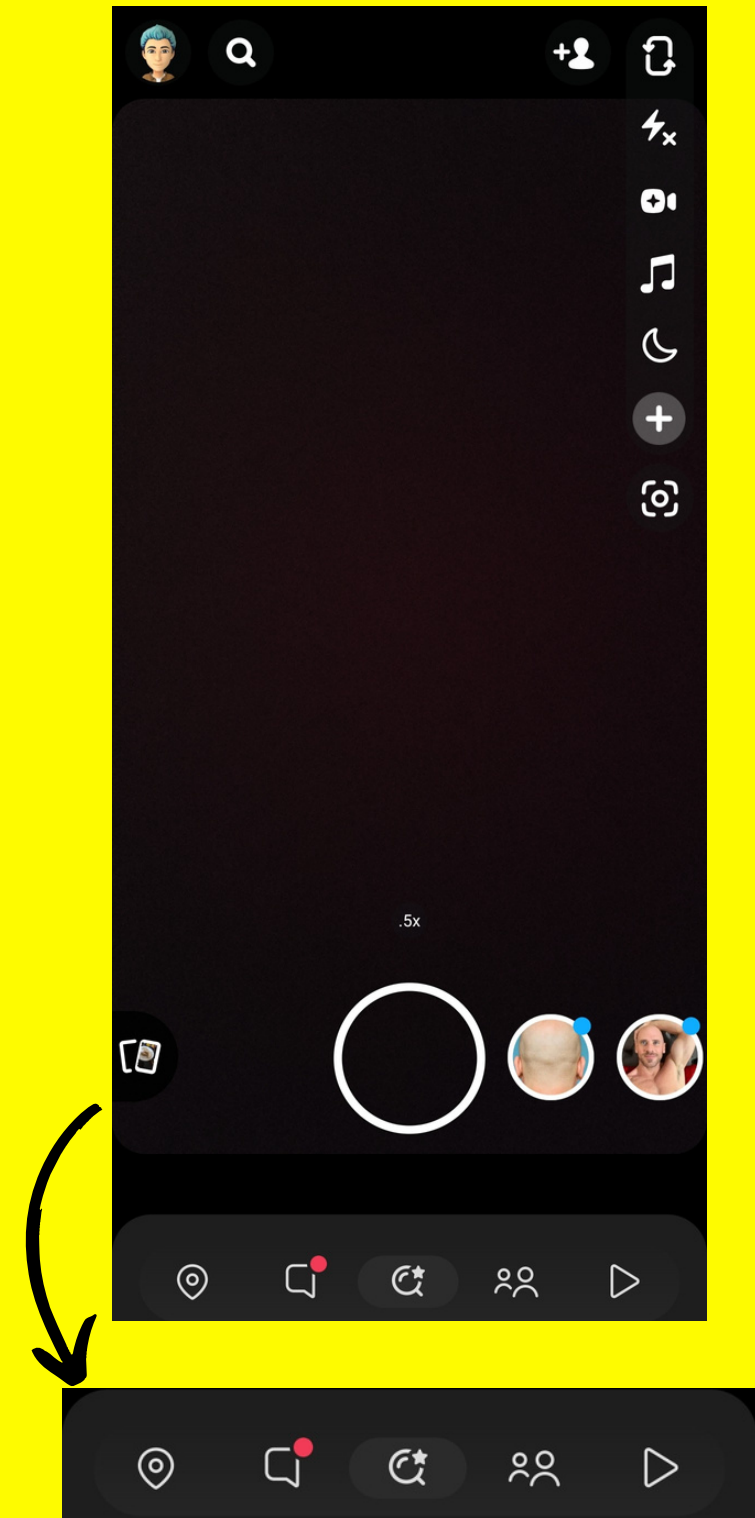

4. Click on the marked area.

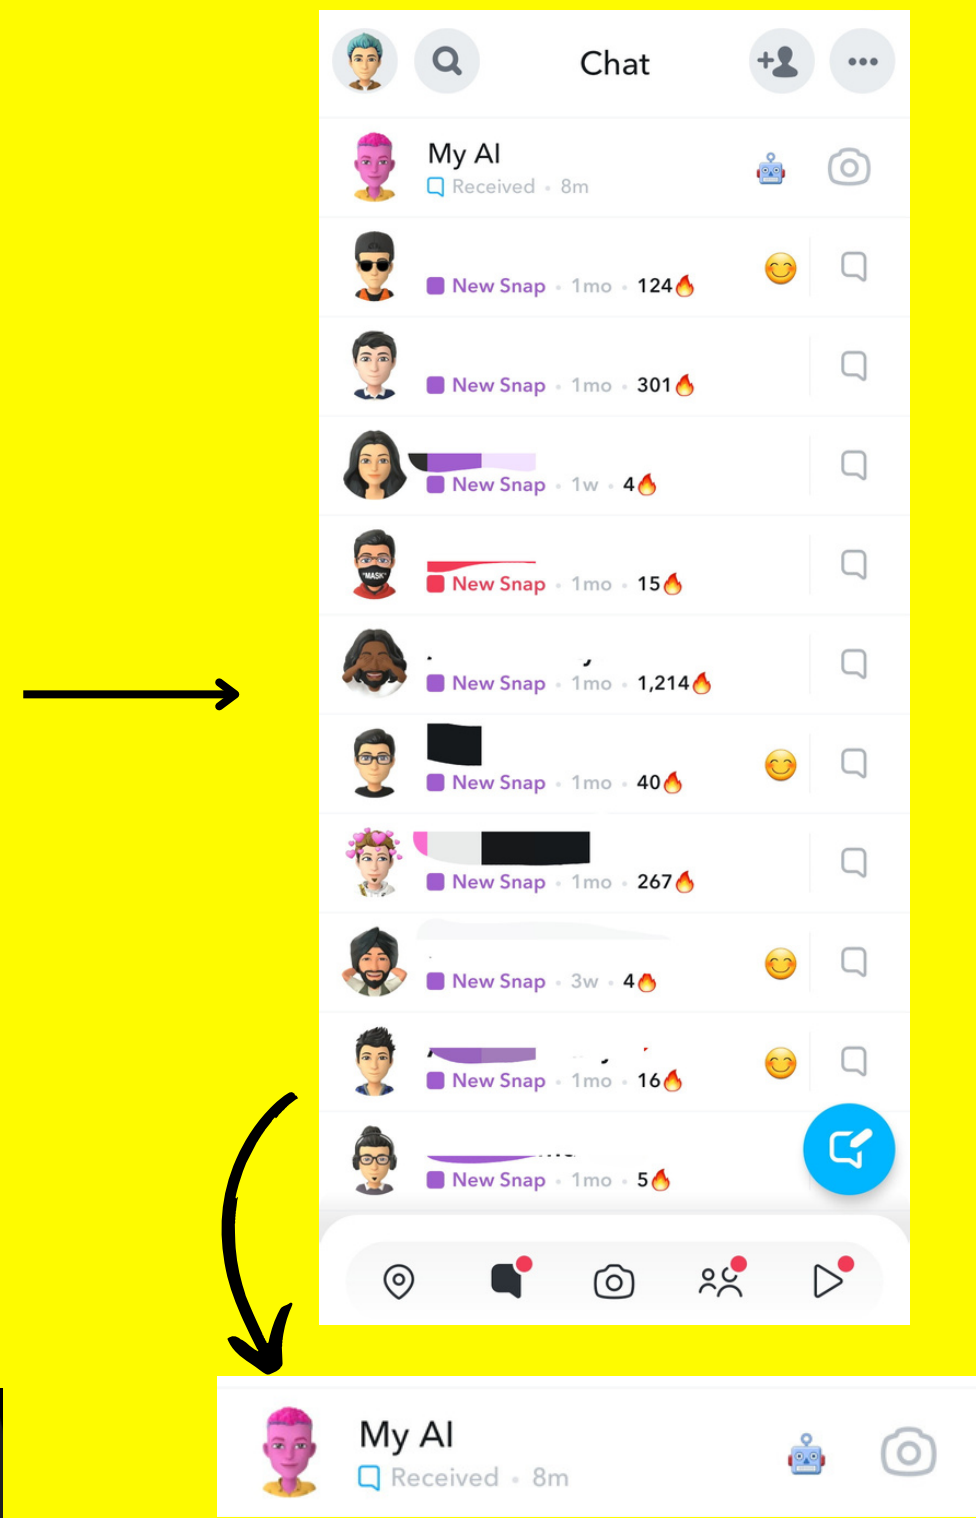

5. Give a nickname and click on "Save"

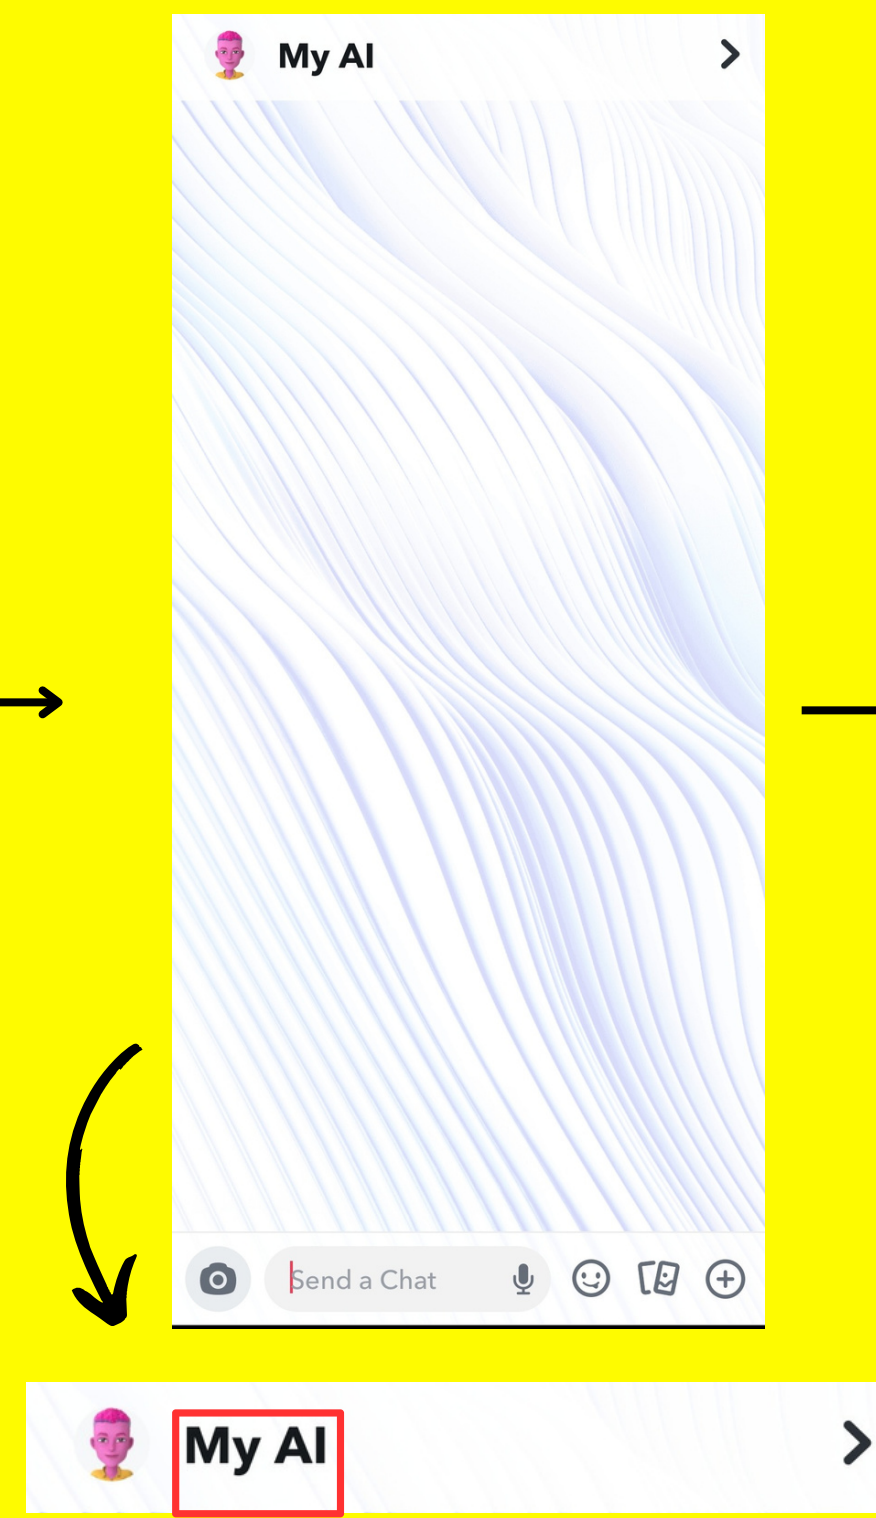

Change Avatar of My AI (1/2)

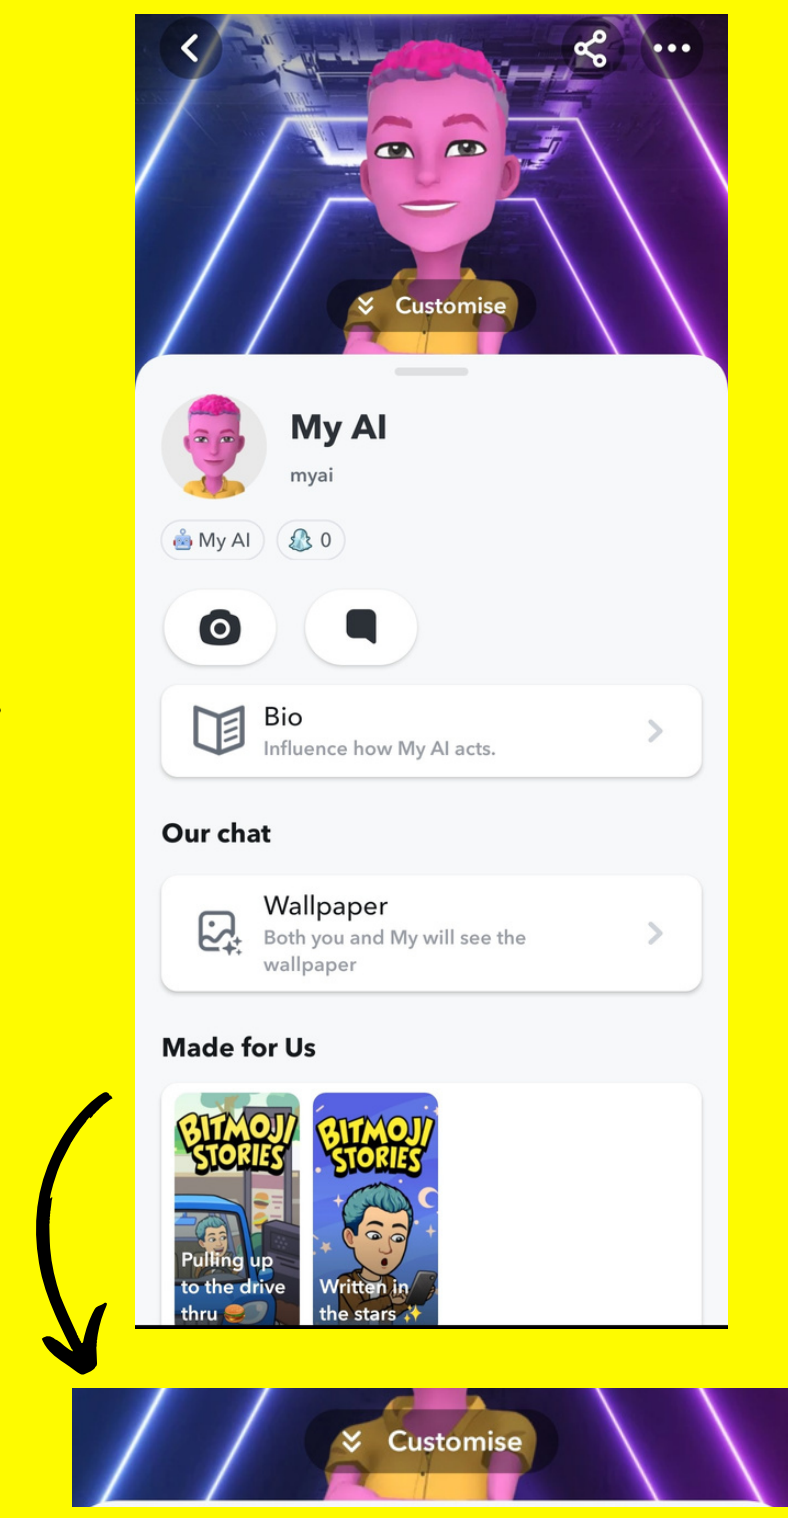

1. Click on the encircled part when you open the app. (It is at the bottom and second from left)

2. Click on "My AI" (click on the animated face or avatar to skip to the step 4)

3. Click on the marked

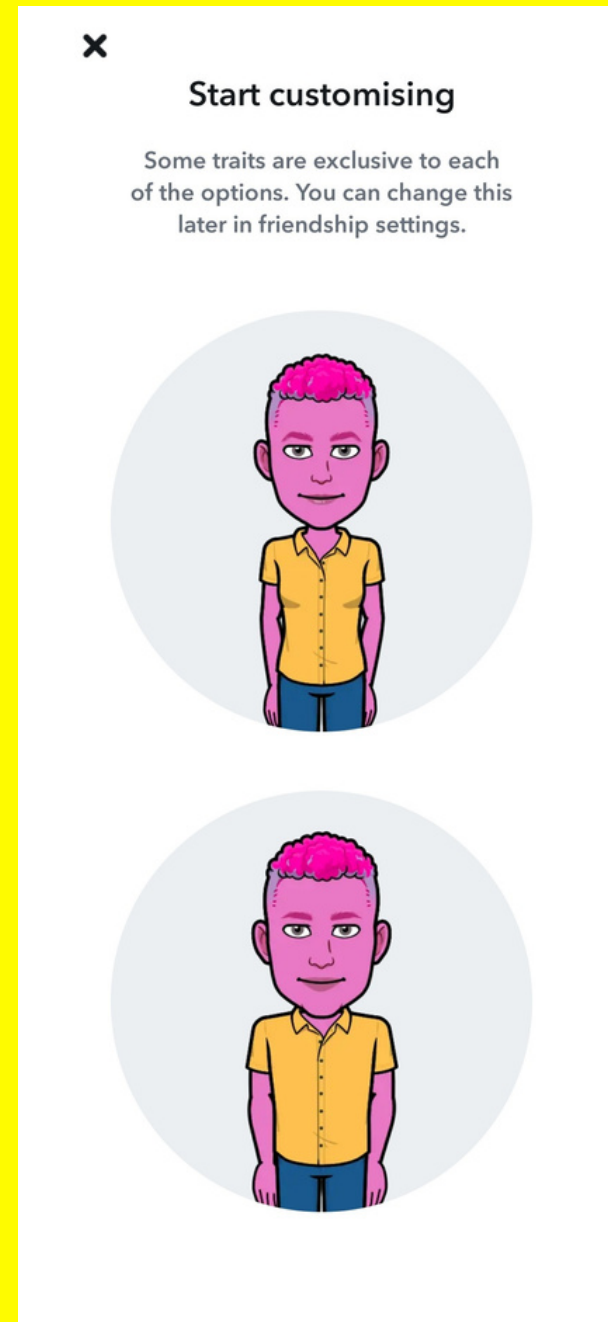

4. Click on the "Customise"

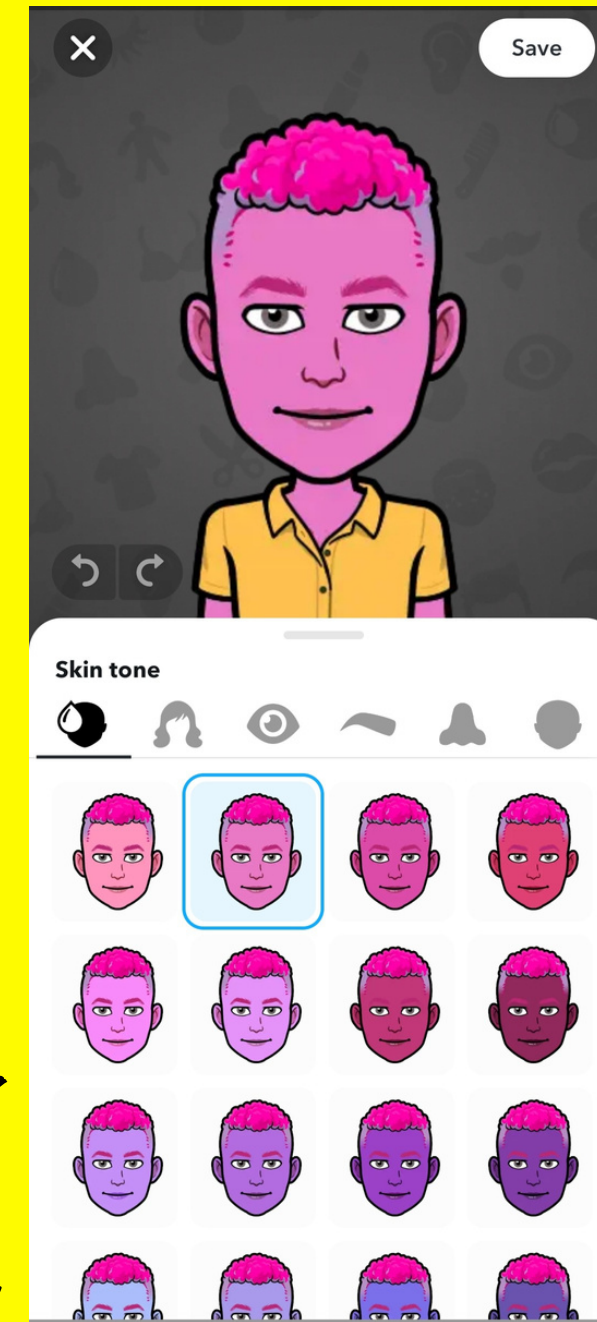

Change Avatar of My AI (2/2)

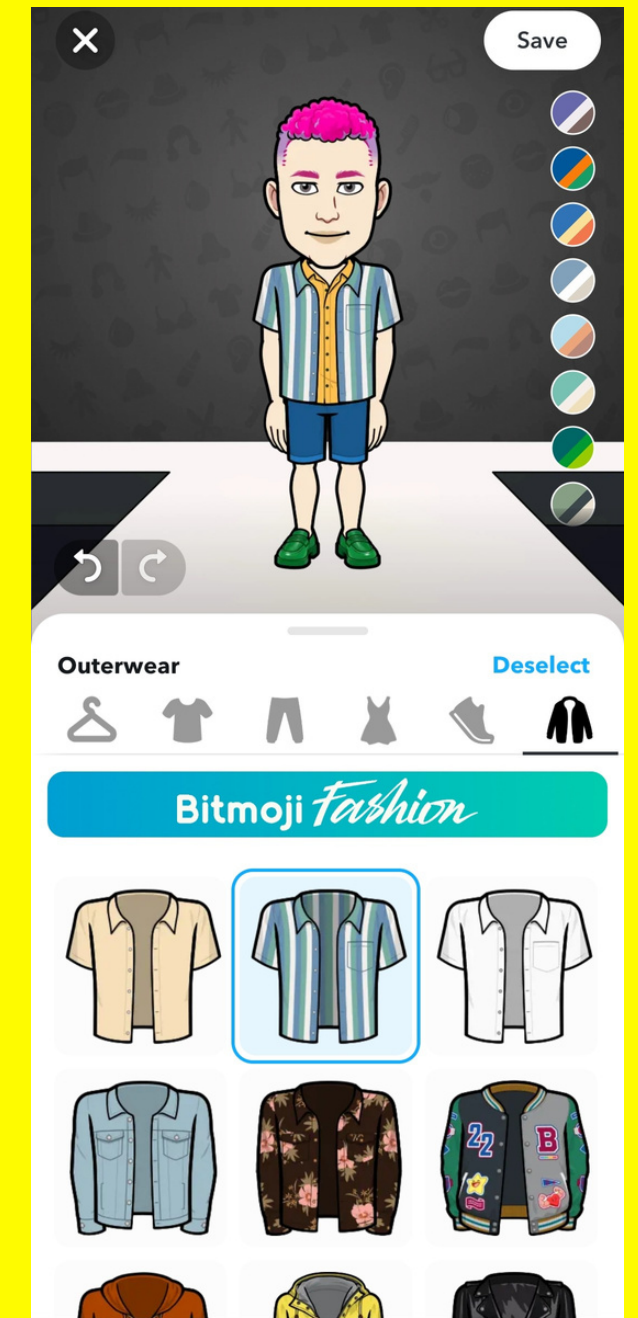

5. Click on either "Avatar" or "Outfit"

6. Set a gender for AI bot.

7. Set a look, physique and dress for the AI based on the attributes.

8. Click on "Save" to save the changes made on "My AI"

Pros and Cons

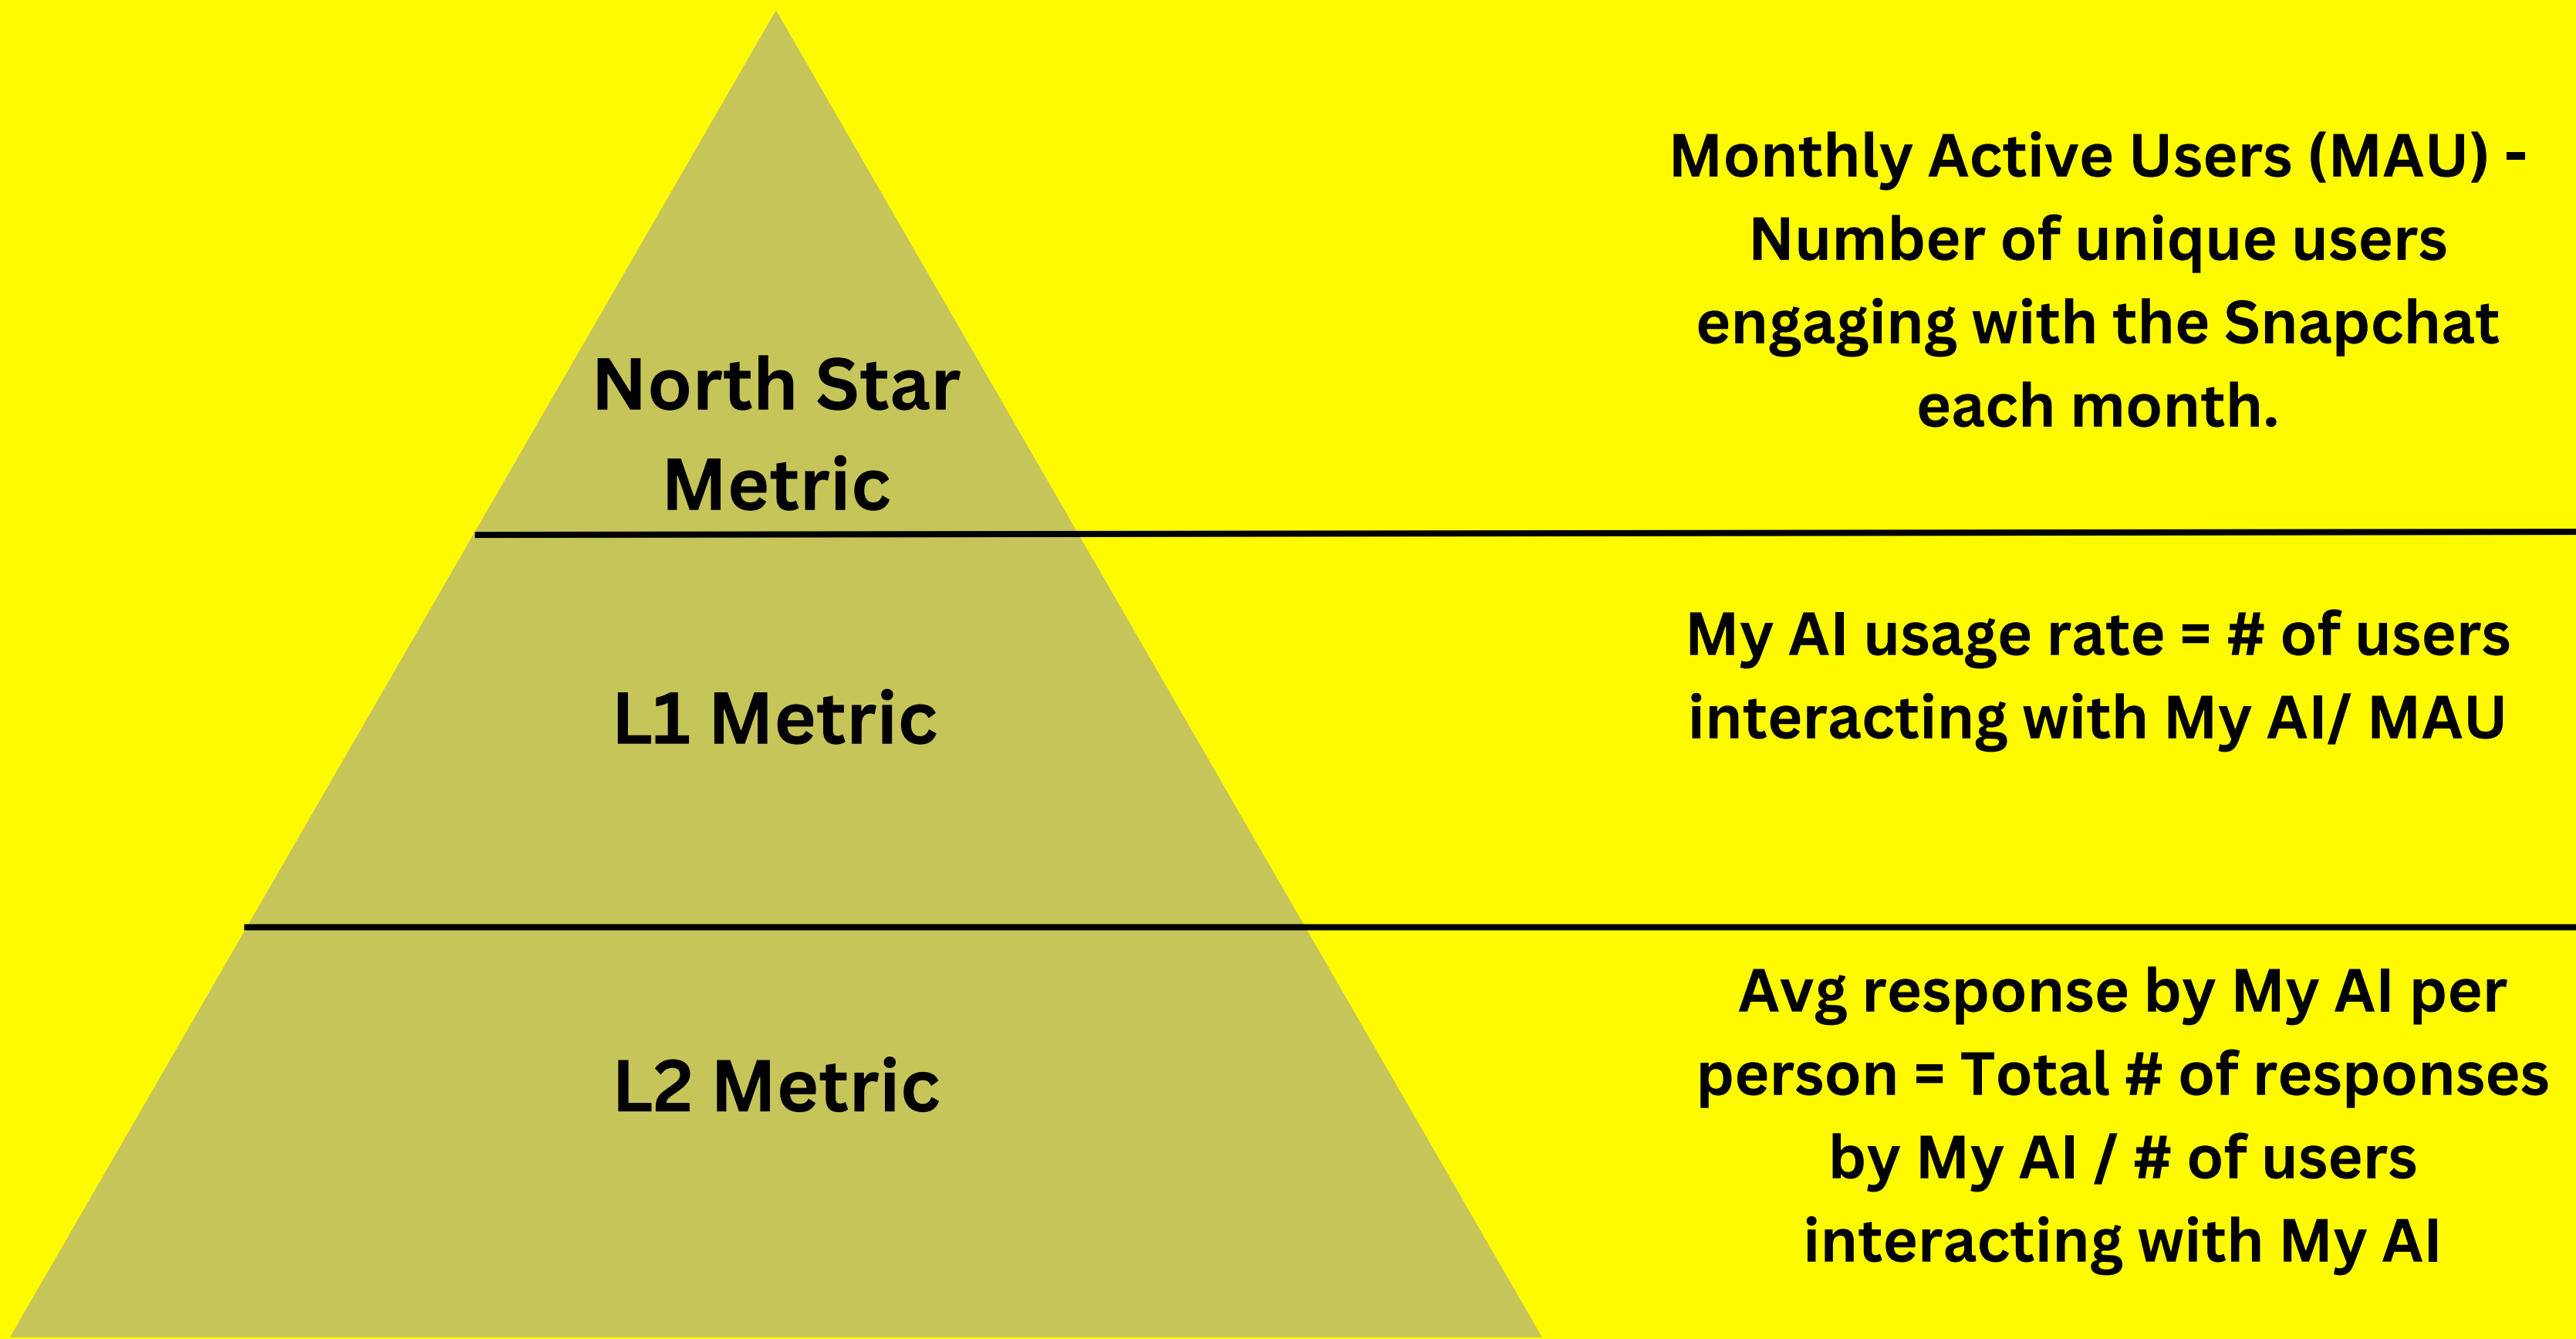

Pros

- User friendly and has simple interface.
- Gives concise and short response of a question asked.
- Good for informal chats.
- It uses a personalized approach to question answering. Over time, the AI can learn about each user's tastes and interests, enabling it to offer personalized responses.
- Suggests good filters and lenses
- It can access Snap Maps, as well as your location, to provide you good suggestions for nearby locations.

Cons

- Chats cannot be stored after 24 hours of viewing.
- Sometimes provides biased and hurtful responses.
- Just like ChatGPT, My AI has information of up to October 2021.
- Not for professional chats.
