

Driver App Redesign

High-Level User Flow & UX Proposal

– by Karandeep Singh

Why Redesign the Swiggy Driver App?

😓 High Cognitive Load

- **72%** riders say app clutter **slows them down** while working
- **Source:** Fairwork India Report 2023 (IIT Delhi + Oxford)

Core Insights:

High cognitive load, clutter, slow decisions

🔍 Small Tap Targets

- **45%** delivery workers report **mis-taps** due to small buttons
- **Source:** NITI Aayog Gig Economy Usability Survey 2022

Core Insights:

Small tap targets, unsafe, mis-taps,

🕶 Low Readability + Accessibility

Issues

- **58%** gig workers struggle with **small fonts** outdoors
- **8%** of men are **color-blind**
- **Sources:** Fairwork India 2023, NIH

Core Insights:

Low readability, small fonts, color-blind issues

🗺 Poor Navigation Clarity

- **68%** riders struggle to **read map directions** while riding
- **Source:** Fairwork India 2023

Core Insights:

Navigation clarity, map readability, zoom issues

📉 Low-End Device Performance Issues

- Most gig workers use **low-end Android phones** leading to **crashes + battery drain**
- **Source:** NITI Aayog "India's Booming Gig Economy" 2022

Core Insights:

Crashes, lag, battery drain, low-end devices

📱 No PiP

- **61%** riders rely on **Google Maps separately**
- **Source:** GigIndia Driver Insights 2022

Core Insights:

No PiP, unsafe app switching, multitasking issues

Who are the Target User Persona?

Aman, 22

Part-Time Rider | Student

Daily Use: 3-5 hours

Context: Frequent multitasking (calls, WhatsApp, maps)

Top Pain Points

- No PiP :- unsafe app switching
- Map zoom-out :- loses direction
- Small CTAs :- missed taps
- Text-heavy instructions while moving

Problem Statement

"Aman needs a multitasking-safe navigation flow with PiP and clearer, faster decision cues."

Rahul, 32

Full-Time Rider

Daily Use: 10-12 hours

Context: Low-end Android, long outdoor shifts

Top Pain Points

- Color-blind :- misses low-contrast alerts
- App crashes + battery drain
- Small tap targets :- unsafe to use while riding
- Cluttered home screen increases cognitive load

Problem Statement

"Rahul needs a clear, high-contrast, low-distraction interface that works reliably on low-end devices."

UX Audit: What Works & What Fails

HOME SCREEN

What Works

- 1. **Familiar layout** (bottom navigation follows **Jacob's Law**)
- 2. **Useful earning & shift** reminders are present
- 3. **Consistent iconography** across the app

What Doesn't Work

- 1. **Too much clutter**
 - Multiple promos + 1 **5-slide carousel** :- **high cognitive load**
 - Hard to scan quickly (Miller's Law)
- 2. **Primary action not prioritized**
 - **"Go Online"** CTA sits below promotions
 - Not immediately visible when driver opens the app
- 3. **Small Online/Offline toggle**
 - Hard to tap :- **unsafe while riding** (Fitts's Law)
- 4. **Earnings not visible upfront**
 - No **today/week earnings** or goal progress
 - Driver's main motivation is buried
- 5. **Weak visual hierarchy**
 - Bright competing colors :- no focal point
 - Promotions dominate over functional elements

Key Insight

The home screen hides core actions, floods the driver with promotions, and lacks clear earnings visibility — slowing down the driver's workflow and increasing cognitive load

JOB SCREEN

What Works

- 1. **Clear earnings range** shown upfront
- 2. **Pickup details** displayed in a structured block
- 3. **Large "Accept Order" button** at bottom
- 4. **Split layout** (map on top, details below) helps context

What Doesn't Work

- 1. **Decision-critical info lacks hierarchy**
 - ₹ amount, distance, and time are **not visually grouped**
 - Driver cannot quickly judge effort vs reward
- 2. **Reject button placed awkwardly**
 - Small, floating, and away from main CTA
 - Easy to mis-tap (Fitts's Law)
- 3. **Too much vertical scrolling**
 - Map + header + earning block consumes space
 - Key info gets pushed downward
- 4. **Low contrast in pink header**
 - "Order" banner is hard to read outdoors
- 5. **Missing ETA / travel clarity**
 - "Time: -- mins" :- driver cannot estimate travel before accepting
 - Increases hesitation and slows decision making

Key Insight

The job card scatters key decision details and lacks clear grouping, slowing drivers during time-critical decisions.

UX Audit: What Works & What Fails

NAVIGATION SCREEN

What Works

1. **Familiar Google Maps** layout :- easy recognition (Jacob's Law)
2. Clear **driver + pickup markers**
3. Route visualization generally intuitive

What Doesn't Work

1. **Map zoom is too far out**
 - Hard to see lane-level details
 - Driver must mentally interpret the route :- **slows navigation**
2. **Critical actions are too small**
 - Small buttons for support, alerts, or menu
 - Violates Fitts's Law :- **difficult to tap while moving**
3. **Low visibility of ETA + key info**
 - ETA not dominant on screen
 - Hard to read outdoors, especially while riding
4. **No Picture-in-Picture (PiP)**
 - Drivers must switch between apps (Google Maps ↔ Swiggy)
 - Increases safety risk and **reduces responsiveness**
5. **Alert banner blends into map**
 - "Reach by — to avoid going offline" lacks contrast
 - Easily missed in sunlight

Key Insight

Navigation lacks clarity and prioritization, slowing drivers and increasing cognitive effort during rides

MY SHIFT SCREEN

What Works

1. Day tabs are **clear and familiar**
2. "High earning" **badges** give useful guidance
3. Structured list of **shifts** is easy to scan

What Doesn't Work

1. **Tiny checkboxes** :- easy to mis-tap
 - Violates Fitts's Law
 - Very **hard to tap** on the move
2. **Small font + low emphasis**
 - Not ideal for bright **outdoor use**
 - Important shift info doesn't stand out
3. **Promotion banner interrupts task flow**
 - Pushes **tasks downward**
 - Adds unnecessary visual noise
4. **Weak hierarchy between shifts**
 - All shift cards look **identical**
 - Hard to distinguish high-value vs normal shifts
 - Violates Law of Hierarchy / Proximity
5. **No visual feedback on "selected" shifts**
 - Drivers can't instantly see which shift they've chosen

Key Insight

Small controls and weak hierarchy make shift selection slow, unclear, and error-prone.

Feature Prioritization: Impact vs Effort Matrix

- Legend**
- **Impact:** Driver clarity, safety, speed
 - **Effort:** Engineering complexity, backend dependency
 - **Goal:** Quick usability wins first

Proposed UX & Feature Solutions

Quick Wins (High Value, Low Effort)

- ⚡ Large Tap Targets**
Reduces mis-taps & improves safety.
- ⚡ High Contrast Mode**
Improves outdoor readability & visibility.
- ⚡ Color-Blind Safe Palette**
Keeps alerts & cues visible for all riders.
- ⚡ Simplified Job Card Layout**
Faster Accept/Decline decisions.
- ⚡ Local Language Support**
Makes onboarding and usage easier.
- ⚡ Decluttered Home Screen**
Prioritizes “Go Online” + removes banner noise.

Major Enhancements (High Value, High Effort)

- 🚀 Picture-in-Picture (PiP) Navigation**
Makes navigation safer by preventing app switching.
- 🚀 Offline Mode + Auto Sync**
Reliable flow in low-network zones.
- 🚀 Earnings Forecast & Goal Tracker**
Boosts motivation & transparency.
- 🚀 Navigation Clarity Upgrade**
Better map zoom, route clarity & ETA visibility.
- 🚀 Low-End Device Optimization**
Reduces crashes, lag & battery drain.

These improvements enhance clarity, reduce cognitive load, and improve driver performance across the journey.

Success Metrics

Reduction in Mis-tap Rate

Target: ↓ 30–40 %
Larger tap targets and cleaner layouts reduce interaction errors.

Faster Job Decision Time

Target: ↓ 15–25 %
Clear grouping of ₹, distance, and time speeds up decision-making.

Reduction in App Switches During Navigation (PiP)

Target: ↓ 40 %
PiP keeps navigation visible and prevents unsafe app toggling.

Driver App Satisfaction (CSAT)

Target: ↑ 20–25 %
Overall clarity, navigation improvements, and smoother workflows boost satisfaction.

Improved Readability Score

Target: ↑ 25 %
High contrast mode and simplified layouts improve outdoor and night visibility

Increased Shift Selection Completion Rate

Target: ↑ 15 %
Bigger tap zones and visual hierarchy make shift booking faster.

Redesigned Driver Experience: Key UX Improvements

HOME SCREEN

Revamp Features

- 1. **Added Financial Tracker**- Shows daily + monthly earnings upfront.
- 2. **Enlarged Online/Offline Toggle**- Fixes mis-taps and increases visibility.
- 3. **Removed Promo Carousel**- Reduces clutter and cognitive load.
- 4. **Prioritized "Go Online" CTA**- Moved above promos for faster action.
- 5. **Repositioned Today's Progress**- Daily earnings + time + orders now visible sooner.
- 6. **Shifted Promotions Lower**- Functional elements appear before offers.
- 7. **Cleaned Refer & Earn Placement**- Visible but not disruptive.

LANGUAGE SCREEN

Revamp Features

- 1. **Added Home-Level Language Access**- One-tap entry instead of deep settings.
- 2. **Large Tappable Language Tiles**- Easier selection, reduces mis-taps.
- 3. **Simple Grid Layout Introduced**- Faster scanning and decision-making.
- 4. **High-Contrast Labels**- Better readability outdoors.

JOB SCREEN

Revamp Features

- 1. **Grouped Order Metrics Clearly** - ₹ / Time / Distance shown together.
- 2. **Larger Accept & Reject Buttons**- Reduces mis-taps, safer while riding.
- 3. **Added Recenter Button**- Quickly re-aligns map view.
- 4. **Bigger ETA & Distance Text**- Improves scanning and travel clarity.
- 5. **Cleaner Map Layout**- Less vertical scroll, more focus.
- 6. **Additional Navigation Controls**- Quick access via top-right icons.

Redesigned Driver Experience: Key UX Improvements

SHIFT SCREEN

Revamp Features

- 1. Larger Shift Selection Boxes-** Fixes tiny checkbox issue and reduces mis-taps.
- 2. Clearer Shift -** shifts highlighted; iused bigger fonts
- 3. Cleaner Visual Layout-** Less noise; simpler scan pattern for shift timings.
- 4. Improved Selected-** State Visibility- Drivers can instantly see which shift they chose.
- 5. Better Spacing & Grouping-** Dinner / Late Night sections clearly separated for readability.
- 6. Picture-in-Picture Access Added-** Quick PiP toggle lets riders keep navigation visible while using any app.

BEFORE

DARK MODE SCREEN

AFTER

Revamp Features

- 1. Auto Dark Mode in Low Light-** Turns on automatically for night riding.
- 2. Higher Contrast Text & Icons-** ETA, distance, and navigation markers stay readable.
- 3. Reduced Screen Glare-** Safer visibility during night deliveries.
- 4. Improved Map Visibility-** Clearer route line + pickup/drop markers.

End-to-End Driver Journey Flow
