Professional

Main Goal

Know who is calling and able to identify and block spam calls

Digital Culture

SOCIAL MEDIA

MOBILE APP

WEBSITE

Goal

- She is conscious of her safety and wants an app that protects her from robocaller
- Concerned about the safety of personal bank details saved on device and therefore needs an app shield that keeps her credentials safe
- Want to get an alert on fake promotional SMS, so that she won't fall into the trap of scammers

Pain points

- Risk privacy when it collects phone directories from devices to identify spam calls
- Advanced feature available only when upgrading to **Premium**
- Taking control over the device calling feature if setting up Caller ID, setting Truecaller as the default SMS app etc

Interest area

Painting

Travelling

Built connection

Application friendly

CALL NOTIFICATION

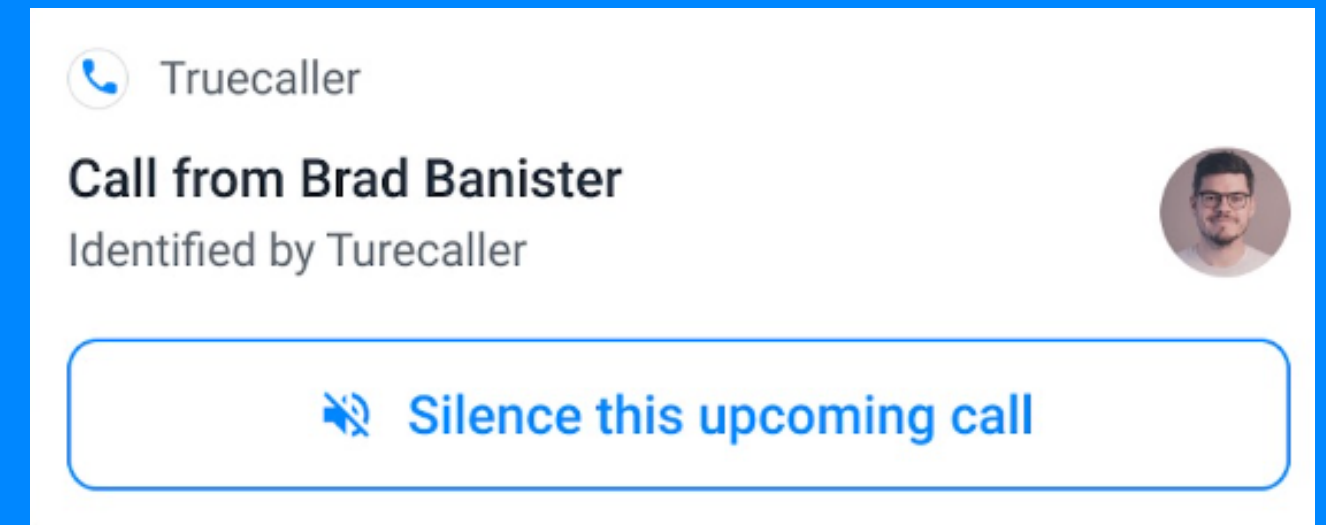

Predicts call before ringing

Whenever a Truecaller user is trying to call, you see a notification that appears on your device **before the call is connected or rings**.

As soon as the call is made, the true caller uses the **data or wifi** to send alerts from the caller's phone to the receiver's phone

How so quick?

Since the data/wifi is faster than the regular cellular network, therefore the notification reaches faster before the call comes through, easing our decision to pick up or drop it

CALL NOTIFICATION

Types of call notification

- **Call Alert notification:** When someone is about to call you
- **Missed call notification:** When someone missed a call on the phone, able to see the name and photo of missed call
- **Remind me of missed calls:** Get a reminder when you forget to call back a missed call
- **Call alert from other apps:** Notification access enables to identify calls from apps like WhatsApp, Instagram etc
- **Spam alert notification:** Notification badge identifying a call as a genuine one or a spam call

SMS NOTIFICATION

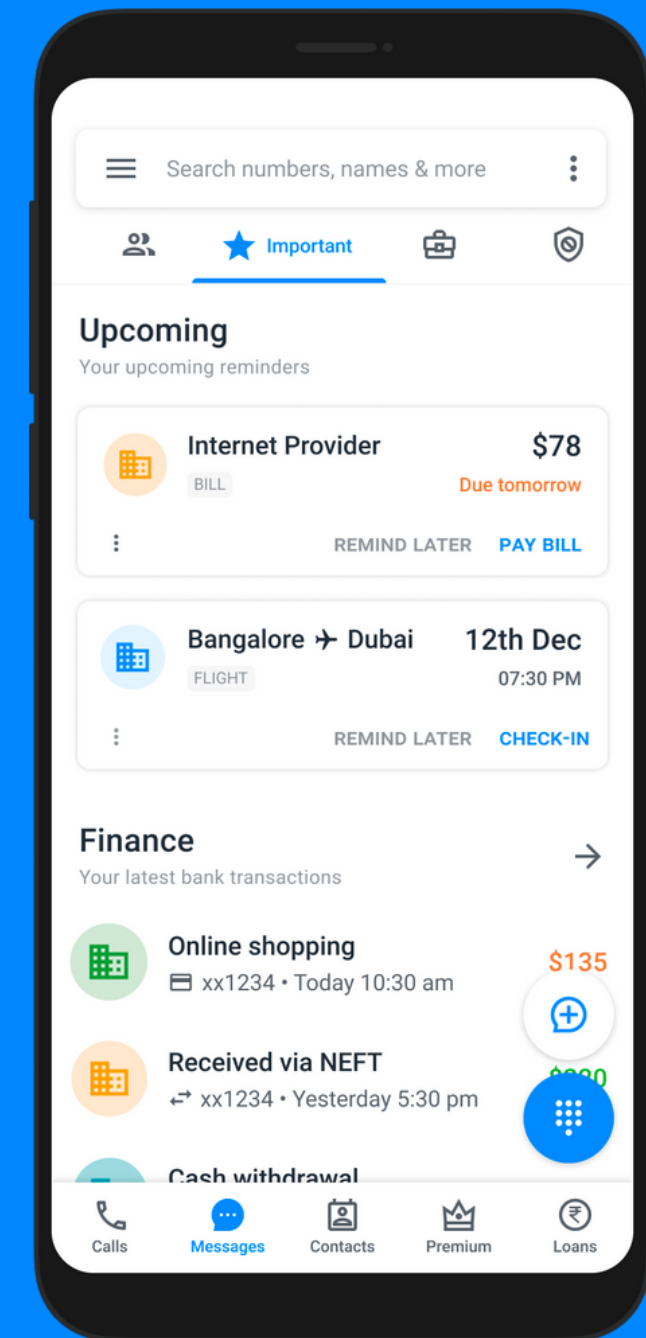

Identify the intent of message

Truecaller SMS feature filters out the spam message to another inbox to eliminate the risk of clicking on fraudulent links

It categorizes the SMS inbox into 4 categories: **Personal, Important, business & Spam**

While receiving risky links, Truecaller identifies the intent of the link and marks it as spam by the Truecaller community

SMART SMS: Smart SMS helps to stay on top of important and urgent SMS while being protected from spam and fraud. It highlighted the important message and all SMS messages are categorized and easily accessible
